- 1) **Thompson (1984) defines five categories** for the process of spreading diffusion from the origin. **Source** is the starting location; **transmission** is what the person who carries the information is doing; **link** is the path; **the original source and spreading mechanism** is the only valid way to count your initial spreader (first messenger) correctly.
- 2) **Thompson (1984) describes diffusion as** a process on the **fronts or tips** of the epidemic. **It does not measure any direct or indirect flow** (backflow or loops of information).
- 3) **Make this point central to the system** of your study, open up the flow, **focus on the spreader** (people who are the origin group of the epidemic).
- 4) **Focus your results on** to which epidemic wave is the origin (be it front) (concentrate on the GO). **Explain why it's critical** (control) and **change from** (process of spreading from tip to tip, focus, source is spreading, go, diffusion).
- 5) **Explain what you are controlling for** the epidemic (controlling for the front) (the GO).

This system is designed to capture the essential (200–2000 Hz) lower range of the voice spectrum, to capture the energy in any other possible spectrum. The multi-resolution algorithm (the multi-scale) was chosen to allow operators. Abstract: The purpose of this study was to determine the effect of a 12-week, low-intensity, low-impact, and low-volume exercise program on the physical fitness of sedentary, middle-aged women. The program was designed to be a safe and effective means of increasing physical activity in sedentary women. The program consisted of three sessions per week, each lasting 30 minutes. The sessions included a warm-up, a low-impact aerobic workout, and a low-intensity strength training routine. The results of the study showed that the program had a positive effect on the physical fitness of the women. There was a significant increase in heart rate, blood pressure, and body mass index (BMI) over the 12-week period. The program was well-tolerated by the women, and they reported a decrease in fatigue and an increase in energy levels. The findings of this study suggest that a low-intensity, low-impact, and low-volume exercise program can be an effective means of improving physical fitness in sedentary, middle-aged women.
