Science and Environment in Chile Javiera Barandiaran, 2018-07-31 The politics of scientific advice across four environmental conflicts in Chile when the state acted as a neutral broker rather than protecting the common good In Science and Environment in Chile Javiera Barandiaran examines the consequences for environmental governance when the state lacks the capacity to produce an authoritative body of knowledge Focusing on the experience of Chile after it transitioned from dictatorship to democracy she

examines a series of environmental conflicts in which the state tried to act as a neutral broker rather than the protector of the common good. She argues that this shift in the role of the state occurring in other countries as well is driven in part by the political ideology of neoliberalism which favors market mechanisms and private initiatives over the actions of state agencies. Chile has not invested in environmental science labs, state agencies with in-house capacities or an ancillary network of trusted scientific advisers despite the growing complexity of environmental problems and increasing popular demand for more active environmental stewardship. Unlike a high modernist empire state with the scientific and technical capacity to undertake large scale projects, Chile's model has been that of an umpire state that purchases scientific advice from markets. After describing the evolution of Chilean regulatory and scientific institutions during the transition, Barandiarán describes four environmental crises that shook citizens' trust in government: the near collapse of the farmed salmon industry when an epidemic killed millions of fish; pollution from a paper and pulp mill that killed off or forced out thousands of black-necked swans; a gold mine that threatened three glaciers; and five controversial mega dams in Patagonia.

Literacy ,2010-01-01 In this era of mandated high stakes and standardized testing teachers and schools officials find themselves struggling to meet the demands for improved student achievement At the same time they are also expected to teach all subjects as required by national and state curriculum standards Because of these competing demands science is not even taught or taught less often in order to make more room for mathematics and language arts drill and practice and teaching to the test Anyone concerned with providing students with a well rounded education should ask whether these drastic measures even if they were to show improvement in achievement justify denying children access to the unique opportunities for intellectual growth and social awareness that the effective instruction of science provides Will these students have enough exposure to the science curriculum to prepare them to do well later in middle and high school How is this current situation going to help ameliorate the pervasive achievement gap in science and how is it going to motivate students to pursue science related careers The authors of this book believe that instead of sacrificing the science curriculum to make more time for drill and practice in mathematics and language arts what should be done is to connect current research on literacy and science instruction with effective pedagogy Therefore this volume provides fresh theoretical insights and practical applications for better understanding how science can be used as a pathway to teaching literacy and hence as a pathway to improving teachers practice and students learning **Environmental science : understanding, protecting, and managing the environment in the Baltic Sea region** Lars Rydén,Pawel Migula,Magnus Andersson,2003
