Management provides a comprehensive overview of environmental noise pollution. The book begins by covering the fundamentals of noise and acoustics, major noise sources, and prediction and evaluation techniques. Developments in noise measuring techniques and mapping, and improvement of legislation to control noise pollution, are then discussed, and international regulations are presented. Technological advances and recent developments regarding strategy and action plans are also covered in depth. Key features: Summarizes the relevant international standards covering noise pollution and environmental engineering practice. Presents technological advances and recent developments regarding strategy and action plans. Aviation and Climate Change Frank Fichert, Peter Forsyth, Hans-Martin Niemeier, 2020-05-19. This book analyses the political, economic, and managerial challenges for policy makers and the air transport industry as they face climate change. Based on an overview of the scientific background and technological options for emissions reduction, Aviation and Climate Change provides an in-depth assessment of environmental regulation and management. It provides an up-to-the-minute analysis of the effects of aviation on climate change and an economic analysis of policies to reduce or eliminate greenhouse gas emissions. The main emphasis of the book is on the economic mechanisms used to lessen emissions: carbon taxes, emissions trading schemes, and offset schemes. It pays particular attention to the ways these policies work and to the interaction between them, for instance, the interaction between taxes and emissions trading schemes. One feature of the book is that it analyses the Carbon Offsetting and Reduction Scheme for International Aviation (CORSIA), which has been developed by ICAO for international aviation and which is due to commence operation shortly. The advantages and disadvantages of this controversial scheme are discussed. This book will be of interest to researchers in diverse areas: economics, political science, engineering, natural sciences, to air transport policy makers, and to managers in the aviation industry.
