Starting Over - The Language Development in Internationally-Adopted Children Fred Genesee, Audrey

Delcenserie, 2016-04-06 Internationally adopted children are a unique population of language learners. They discontinue acquisition of their birth language when they are adopted by families that speak other languages. Their unique language learning history raises important practical, clinical, and theoretical issues. Practically speaking, what is the typical language learning trajectory of these children after adoption, and what factors affect their language learning age at adoption, country of origin, quality and nature of the pre-adoption learning environment, and others? They also raise important theoretical questions: How resilient is their socio-emotional, cognitive, and language development following adoption? Does their language development resemble that of first or second language learners or something else? Do they experience total attrition of their birth language? Are there neuro-cognitive traces of the birth language after adoption, and what neuro-cognitive processes underlie acquisition and processing of the adopted language? Are they the same as those of monolingual native speakers or those of early second language learners? And how do we interpret differences, if any, between adopted and non-adoptive children? Chapters in this volume by leading researchers review research and provide insights on these issues. *National evaluation of Early Reading First final report*, 2007 [Semantic Processing and Word Finding Difficulty Across the Lifespan](#)

Pei-Fang Hung, Lei Sun, 2021-11-30 For readers looking to understand lexical access and word finding difficulty, *WFD: Semantic Processing and Word Finding Difficulty Across the Lifespan: A Practical Guide for Speech Language Pathologists* provides a comprehensive review of current research and clinical approaches to establish a holistic interdisciplinary understanding of lexical access and retrieval difficulty across different communication disorders. By including practical guidelines and protocols, this professional text can help speech language pathologists (SLPs) and other related professionals bridge the gap between research and clinical practice. This text covers a wide range of communication disorders, including developmental language disorder, autism spectrum disorder, aphasia, normal aging, and dementia. It illustrates the connections between the research evidence and clinical practice and addresses lexical learning and retrieval difficulty through a holistic lens and cognitive-linguistic frameworks. This text integrates research evidence from a variety of disciplines, including speech language pathology, linguistics, neuroscience, and psychology. The authors take readers for a deep dive into different underlying problems that lead to lexical access and retrieval difficulty and strategies to remediate them effectively. By addressing lexical issues from a broader view, this unique resource helps readers see the connections from different perspectives to further understand the complex issues involved in lexical learning and retrieval. **Key Features:** A discussion of lexical learning and expansion from birth to school age by incorporating metalinguistic skills and considering the relationships between language domains. An exploration of contributing factors to lexical learning and word retrieval. A holistic review of standardized and nonstandard measures for the breadth and depth of lexical access and retrieval across the lifespan and for people with diverse cultural and linguistic backgrounds. A comprehensive review of current available

evidence based and semantic focused interventions for both developmental and neurogenic communication disorders Chapter summaries and discussion questions close each chapter Clinical implication sections help connect research to clinical practice Therapy plan examples for commonly implemented lexical intervention approaches Disclaimer Please note that ancillary content such as documents audio and video etc may not be included as published in the original print version of this book

Pediatric Neuropsychiatry C. Edward Coffey, Roger A. Brumback, 2006 Pediatric Neuropsychiatry provides the most updated and clinically relevant information on psychiatric disorders in children and adolescents with disturbances of brain function. Bridging the fields of psychiatry and neurology, this landmark work emphasizes the link between developmental brain biology and behavior. Major sections focus on neuropsychiatric aspects of specific psychiatric and neurologic disorders, highlighting the influence of the developing nervous system on these disorders, pathophysiology, manifestations, clinical course, treatment, and prognosis. Other sections discuss all contemporary diagnostic and therapeutic modalities. Chapters include case histories, algorithms, tables, and appendices that explain the rudiments of testing.

Speech-Language Pathologists in Early Childhood Intervention Kathleen D. Ross, 2017-11-01 Speech Language Pathologists in Early Childhood Intervention: Working with Infants, Toddlers, Families, and Other Care Providers presents practicing clinicians and graduate students with the skills necessary to provide evidence-based best practice services to young clients struggling to gain functional communication skills and their families. It also serves to broaden the understanding of early intervention within the field of speech language pathology. Through research, real-life scenarios, and practical documents, the text presents positive advocacy for this population. The text begins with a general overview of the history and rationale for early childhood intervention, including the Individuals with Disabilities Education Act (IDEA) Part C program and Early Head Start, as well as a description of the need for speech language pathologists in early intervention. The majority of the text offers assessment and intervention strategies and tools, including specific tests and curricula, training resources, and the importance of using ongoing assessment for this young age. Strategies for coaching parents and collaborating with professional colleagues, as well as working within daily routines in natural environments for the child, all integral components of the Part C early intervention program, are interwoven throughout. The text concludes with the importance of viewing children holistically, taking into consideration all aspects of a child's being, and acknowledging the interrelatedness of their developing skills, as well as the importance of family in their development. Speech language pathologists have a critical role in evaluation, assessment, and intervention for young children with or at risk for communication disorders. Speech Language Pathologists in Early Childhood Intervention creates a pathway for investing in the principles and activities of early intervention that can lead to best practice and positive outcomes for this young population.
