**Macroeconomic Effects of Sovereign Restructuring in a Monetary Union** Lorenzo Forni, Massimiliano Pisani, 2013-12-26 We assess the macroeconomic effects of a sovereign restructuring in a small economy belonging to a monetary union by simulating a dynamic general equilibrium model In line with the empirical evidence we make the following three key assumptions First sovereign debt is held by domestic agents and by agents in the rest of the monetary union Second after the restructuring the sovereign borrowing rate increases and its increase is fully transmitted to the borrowing rate paid by the domestic agents Third the government cannot discriminate between domestic and foreign agents when restructuring We show that the macroeconomic effects of the restructuring depend on a the share of sovereign bonds held by residents in the country as compared to that held by foreign residents b the increase in the spread paid by domestic agents and c its net foreign asset position at the moment of the restructuring Our results also suggest that the sovereign restructuring implies persistent reductions of output consumption and investment that can be large in particular if the share of public debt held domestically is large the private foreign debt is high and the spread paid by the government and the households does increase

**The External Balance Assessment (EBA) Methodology** Mr. Steven Phillips, Mr. Luis Catão, Mr. Luca Antonio Ricci, Mr. Rudolfs Bems, Ms. Mitali Das, Mr. Julian Di Giovanni, Ms. Filiz Unsal, Marola Castillo, Jungjin Lee, Jair Rodriguez, Mr. Mauricio Vargas, 2014-01-13 The External Balance Assessment EBA methodology has been developed by the IMF's Research Department as a successor to the CGER methodology for assessing current accounts and exchange rates in a multilaterally consistent manner Compared to other approaches EBA emphasizes distinguishing between the positive empirical analysis and the normative assessment of current accounts and exchange rates and highlights the roles of policies and policy distortions This paper provides a comprehensive description and discussion of the 2013 version 2.0 of the EBA methodology including areas for its further development

**The Evolution of Current Account Deficits in the Euro Area Periphery and the Baltics** Mr. Joong Kang, Mr. Jay C. Shambaugh, 2013-07-17 Explanations of the large current account deficits for the euro area periphery and the Baltics in the run up to the crisis revolve around two main factors deteriorating export performance or demand driven booms We add that there were important movements in transfers and net income balances While export performance remained relatively stable in most countries for some countries when transfers declined households and firms borrowed so as to maintain the same level of spending This was part of a persistent failure to adjust to trade deficits which along with rising net income payments led to growing current account deficits All of these factors played varying roles in the development of current account deficits across these countries

*Capital Flows are Fickle* Mr. John C. Bluedorn, Rupa Duttagupta, Mr. Jaime Guajardo, Petia Topalova, 2013-08-23 Has the unprecedented financial globalization of recent years changed the behavior of capital flows across countries Using a newly constructed database of gross and net capital flows since 1980 for a sample of nearly 150 countries this paper finds that private capital flows are

typically volatile for all countries advanced or emerging across all points in time This holds true across most types of flows including bank portfolio debt and equity flows Advanced economies enjoy a greater substitutability between types of inflows and complementarity between gross inflows and outflows than do emerging markets which reduces the volatility of their total net inflows despite higher volatility of the components Capital flows also exhibit low persistence across all economies and across most types of flows Inflows tend to rise temporarily when global financing conditions are relatively easy These findings suggest that fickle capital flows are an unavoidable fact of life to which policymakers across all countries need to continue to manage and adapt

**Sovereign Debt Markets in Turbulent Times** Fernando Broner,Aitor Erce,Alberto Martin,Jaume Ventura,2013-12-27 In 2007 countries in the Euro periphery were enjoying stable growth low deficits and low spreads Then the financial crisis erupted and pushed them into deep recessions raising their deficits and debt levels By 2010 they were facing severe debt problems Spreads increased and surprisingly so did the share of the debt held by domestic creditors Credit was reallocated from the private to the public sectors reducing investment and deepening the recessions even further To account for these facts we propose a simple model of sovereign risk in which debt can be traded in secondary markets The model has two key ingredients creditor discrimination and crowding out effects Creditor discrimination arises because in turbulent times sovereign debt offers a higher expected return to domestic creditors than to foreign ones This provides incentives for domestic purchases of debt Crowding out effects arise because private borrowing is limited by financial frictions This implies that domestic debt purchases displace productive investment The model shows that these purchases reduce growth and welfare and may lead to self fulfilling crises It also shows how crowding out effects can be transmitted to other countries in the Eurozone and how they may be addressed by policies at the European level

**Recent Advances in Psychiatry from Psycho-Neuro-Immunology**

**Research: Autoimmunencephalitis, Autoimmune-Encephalopathy, Mild Encephalitis** Karl Bechter,David Brown,Souhel Najjar,2019-08-12 Growing evidence derived from cerebrospinal fluid CSF neuropathological imaging genetic and epidemiological studies link neuroinflammation and immune dysregulation to a subset of individuals with a variety of severe mental disorders SMDs including affective and non affective psychotic disorders Further the recent discoveries of neuronal surface antibodies NSAs in autoimmune encephalitis AE presenting with diverse neuropsychiatric disorders such as psychosis and cognitive decline among many others provides further support to the notion that CNS autoimmunity and neuroinflammation can contribute to the neurobiology of psychiatric disturbances Further these immune mechanisms may contribute to a subset of patients currently diagnosed as having treatment resistant SMDs such as schizophrenia and major depressive disorder Additionally mounting data indicate that various infections can serve as an immunological trigger of aberrant immune responses presumably by causing release of excess neural antigen thereby giving rise to NSAs or aberrant immune cellular responses to give rise to primary or secondary psychiatric disorders such as schizophrenia and those associated with AE respectively Collectively these findings support the mild encephalitis hypothesis of SMD The significant overlap among AE associated psychosis systemic autoimmune disorder associated psychosis and psychotic disorders associated with pathological processes involving inflammation and immune dysregulation has also prompted some authors to adopt the term autoimmune psychosis AP This term reflects that this psychosis subtype is mechanistically linked to complex neuroimmune and inflammatory signalling abnormalities that can be responsive to early immunomodulatory treatment It also suggests that a subset of AP might represent an incomplete or forme fruste subtype of AE presenting with dominant or pure psychiatric symptoms mimicking primary psychiatric illnesses Because data indicate that delayed diagnosis and treatment may lead to permanent sequelae early recognition of AP utilizing neurodiagnostic workup e g CSF analysis neuroimaging and EEG and its early treatment with appropriate immunotherapy are paramount to a meaningful recovery This eBook will provide an overview of the current knowledge and research areas from epidemiology risk factors and diagnosis to the management of these conditions in this rapidly emerging field helping to bridge the gaps in knowledge that currently exist in the disciplines of Psychiatry Neurology and Neuroimmunology *Global Liquidity Transmission to Emerging Market Economies, and Their Policy Responses* Woon Gyu Choi,Taesu Kang,Geun-Young Kim,Byongju Lee,2017-10-30 This paper

distills and identifies global liquidity GL momenta from the macro financial data of advanced economies through a factor model with sign restrictions as policy driven market driven and risk averseness factors Using a panel factor augmented VAR we investigate responses of emerging market economies EMEs to GL shocks A policy driven liquidity increase boosts growth in EMEs elevating stock prices and currency values while a risk averseness rise has an opposite effect A market driven GL expansion boosts stock markets and lowers funding costs promoting competitiveness and current account Inflation targeting EMEs fare better than EMEs under alternative regimes with respect to macrofinancial volatility

The Traffic Bulletin ,1924 Spatially Resolved Operando Measurements in Heterogeneous Catalytic Reactors ,2017-11-13 Spatially Resolved Operando Measurements in Heterogeneous Catalytic Reactors Volume 50 presents the latest on these essential components in the continuing search for better utilization of raw materials and energy that reduces impact on the environment This latest release includes valuable chapters that present tactics on Understanding the performance of automotive catalysts via spatial resolution of reactions inside honeycomb monoliths Operando spectroscopy in catalytic reactors Spatio temporal phenomena in monolithic reactors measured by combined spatially resolved mass spectrometry and optical frequency domain reflectometry and In situ

spatially resolved techniques for the investigation of packed bed catalytic reactors Current status and future outlook This series presents the latest reviews of the state of the art of in heterogeneous catalytic reactors and processes Contains reviews by leading authorities in their respective areas Presents up to date reviews of the latest techniques in the modeling of catalytic processes Includes a broad mix of US and European authors as well as academic industrial and research institute perspectives Provides discussions on the connections between computation and experimental methods Private Equity at Work Eileen Appelbaum, Rosemary Batt, 2014-03-31 Private equity firms have long been at the center of public debates on the impact of the financial sector on Main Street companies Are these firms financial innovators that save failing businesses or financial predators that bankrupt otherwise healthy companies and destroy jobs The first comprehensive examination of this topic Private Equity at Work provides a detailed yet accessible guide to this controversial business model Economist Eileen Appelbaum and Professor Rosemary Batt carefully evaluate the evidence including original case studies and interviews legal documents bankruptcy proceedings media coverage and existing academic scholarship to demonstrate the effects of private equity on American businesses and workers They document that while private equity firms have had positive effects on the operations and growth of small and mid sized companies and in turning around failing companies the interventions of private equity more often than not lead to significant negative consequences for many businesses and workers Prior research on private equity has focused almost exclusively on the financial performance of private equity funds and the returns to their investors Private Equity at Work provides a new roadmap to the largely hidden internal operations of these firms showing how their business strategies disproportionately benefit the partners in private equity firms at the expense of other stakeholders and taxpayers In the 1980s leveraged buyouts by private equity firms saw high returns and were widely considered the solution to corporate wastefulness and mismanagement And since 2000 nearly 11 500 companies representing almost 8 million employees have been purchased by private equity firms As their role in the economy has increased they have come under fire from labor unions and community advocates who argue that the proliferation of leveraged buyouts destroys jobs causes wages to stagnate saddles otherwise healthy companies with debt and leads to subsidies from taxpayers Appelbaum and Batt show that private equity firms financial strategies are designed to extract maximum value from the companies they buy and sell often to the detriment of those companies and their employees and suppliers Their risky decisions include buying companies and extracting dividends by loading them with high levels of debt and selling assets These actions often lead to financial distress and a disproportionate focus on cost cutting outsourcing and wage and benefit losses for workers especially if they are unionized Because the law views private equity firms as investors rather than employers private equity owners are not held accountable for their actions in ways that public corporations are And their actions are not transparent because private equity owned companies are not regulated by the Securities and Exchange Commission Thus any debts or costs of bankruptcy incurred fall on businesses owned by private equity and their

workers not the private equity firms that govern them For employees this often means loss of jobs health and pension benefits and retirement income Appelbaum and Batt conclude with a set of policy recommendations intended to curb the negative effects of private equity while preserving its constructive role in the economy These include policies to improve transparency and accountability as well as changes that would reduce the excessive use of financial engineering strategies by firms A groundbreaking analysis of a hotly contested business model Private Equity at Work provides an unprecedented analysis of the little understood inner workings of private equity and of the effects of leveraged buyouts on American companies and workers This important new work will be a valuable resource for scholars policymakers and the informed public alike     *Prentice-Hall ... **Social Programmes, Poverty Eradication and Labour Inclusion** Laís Wendel Abramo, Simone Cecchini, Beatriz Morales, 2019 Diverse social programmes including conditional cash transfer programmes labour and production inclusion programmes and social pensions are being implemented in Latin American and Caribbean countries with the aim of ending poverty and reducing inequalities throughout the life cycle This book offers an up to date analysis of these programmes and the way they relate to labour inclusion and analyses ongoing debates regarding the possible incentives and disincentives they create in terms of the labour supply formalization and child labour among the target population Considering that poverty is a structural problem of highly unequal societies the thesis that poverty is due to a lack of effort on the part of the poor is argued to be an expression of the strong prejudice against those living in poverty the great majority of whom work or are actively seeking employment but are hampered by the large decent work deficits existing in the region From an integrated and rights based perspective public policies should simultaneously address the twofold challenge of social and labour inclusion in order to achieve basic thresholds of well being by ensuring income universal access to good quality social services and opportunities for decent work
