**Fake News on the Internet** Alan R. Dennis, Dennis F. Galletta, Jane Webster, 2023-09-26 This book provides a review of current research in fake news and presents six new empirical research studies examining its impact Fake news has garnered immense public attention following the 2016 Brexit referendum three US elections the 2019 Indian lynchings and so on Fake news undermines public life across the globe especially in countries where journalistic practices and institutions are weak Some fake news is created to spread ideological messages or to create mischief whereas other fake news is created for profit Research shows that fake news spreads farther faster and more broadly than true news and has had major societal impacts All signs indicate that it will get worse as political activists scammers alternative news media and hostile governments become more sophisticated in their production and targeting of fake news This book features leading scholars who provide a review of the current research and presents six new empirical research studies examining its impact Some of this research shows how inventions designed to reduce fake news can actually have the opposite effect and instead act to increase the spread of fake news Other research takes a longer term perspective by measuring or inserting emotions into headlines allowing us to examine some of the roots of fake news behaviors for future study This shows how challenging the fake news phenomenon is to solve Fake News on the Internet will be a key resource for academics researchers and advanced students of Media Studies Research Methods Information Systems Communication Studies Management Cultural Studies and Sociology The chapters included in this book were originally published as a special issue of Journal of Management Information Systems

groundbreaking approach to currency and community that may allow us to seize carbon from the atmosphere and offer a new tool in the fight against climate change Through the ages currencies have been based on all manner of objects from tobacco leaves to salt to gold to collateralized debt obligations The only thing that this odd assortment of objects shares is the communal belief that these objects could harness and direct economic growth that they are in a sense fertile In *The First and Last Bank* Gustav Peebles and Benjamin Luzzatto propose that atmospheric carbon could be seen anew as fertile in this same sense In other words carbon rather than loom as waste in our skies could instead be drawn down to the earth by millions of currency users and the communally owned banks they rely on where it could serve as a foundation of new biological life Seeing currency as a powerful tool for collective action the authors argue that dovetailing developments in digital currencies and the biosequestration of carbon have together made a new and radical intervention in the climate battle possible a nonproprietary currency backed by sequestered carbon This new currency would be managed via Wikipedia style open source policies that privilege sustainability and equity over endless growth and pollution Because it is backed by sequestered carbon the use of the currency would draw gaseous carbon out of the atmosphere and push it back into the ground following the exact same trajectory as gold during the era of the international gold standard While it is no silver bullet such a currency would act as a necessary complement to wide scale mitigation efforts at the same time engaging ordinary citizens in the fight to reduce the dangerous levels of carbon in our atmosphere **The Routledge Handbook of the Philosophy of Human**
