**Overcoming Barriers to Electric-Vehicle Deployment** National Research Council, Transportation Research Board, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee on Overcoming Barriers to Electric-Vehicle Deployment, 2013-06-18 The electric vehicle offers many promises increasing U S energy security by reducing petroleum dependence contributing to climate change initiatives by decreasing greenhouse gas GHG emissions stimulating long term economic growth through the development of new technologies and industries and improving public health by improving local air quality There are however substantial technical social and economic barriers to widespread adoption of electric vehicles including vehicle cost small driving range long charging times and the need for a charging infrastructure In addition people are unfamiliar with electric vehicles are uncertain about their costs and benefits and have diverse needs that current electric vehicles might not meet Although a person might derive some personal benefits from ownership the costs of achieving the social benefits such as reduced GHG emissions are borne largely by the people who purchase the vehicles Given the recognized barriers to electric vehicle adoption Congress asked the Department of Energy DOE to commission a study by the National Academies to address market barriers that are slowing the purchase of electric vehicles and hindering the deployment of supporting infrastructure As a result of the request the National Research Council NRC a part of the National Academies appointed the Committee on Overcoming Barriers to Electric Vehicle Deployment This committee documented their findings in two reports a short interim report focused on near term options and a final comprehensive report Overcoming Barriers to Electric Vehicle Deployment fulfills the request for the short interim report that addresses specifically the following issues infrastructure needs for electric vehicles barriers to deploying the infrastructure and possible roles of the federal government in overcoming the barriers This report also includes an initial

discussion of the pros and cons of the possible roles This interim report does not address the committee's full statement of task and does not offer any recommendations because the committee is still in its early stages of data gathering The committee will continue to gather and review information and conduct analyses through late spring 2014 and will issue its final report in late summer 2014 Overcoming Barriers to Electric Vehicle Deployment focuses on the light duty vehicle sector in the United States and restricts its discussion of electric vehicles to plug in electric vehicles PEVs which include battery electric vehicles BEVs and plug in hybrid electric vehicles PHEVs The common feature of these vehicles is that their batteries are charged by being plugged into the electric grid BEVs differ from PHEVs because they operate solely on electricity stored in a battery that is there is no other power source PHEVs have internal combustion engines that can supplement the electric power train Although this report considers PEVs generally the committee recognizes that there are fundamental differences between PHEVs and BEVs

examines some of the world's most critical policy issues through a macroeconomics lens. After presenting analytical foundations, modeling tools, and theoretical perspectives, *Economics of Global Business* goes a step further than most other texts with a practical look at the local and multinational tradeoffs facing economic policymakers in more than fifty countries. Topics range from income equality and the financial crisis to GDP inflation and unemployment, and notably one of the first macroeconomic examinations of climate change. Written by a globetrotting economist who teaches and consults on three continents, *Economics of Global Business* aims not for definitive answers but rather to provide a better understanding of the context-dependent rationales, constraints, and consequences of economic policy decisions. The book covers long-run and short-run growth with examples from the United States, China, the European Union, South Korea, Japan, Latin America, Africa, Australia, and Vietnam; financial crises and central banks; monetary and fiscal policies; government budgets; currency regimes; climate change and macroeconomics; income inequality and globalization. All chapters rely on recent and historical examples of economic policy in action. The book is particularly suitable for use as an introduction to macroeconomics for business students.
