enormous potential that Rorty's later philosophical thought possesses using the perspective of the axiological and normative dimensions. With reference to philosophers such as Kant, Dewey, Santayana, and Kolakowski, Krzysztof Piotr Skowronski argues that a democratic society is the basic axiological framework and that Rorty's normative focus is the melioration of democratic society. The novelty of this philosophy is that it pays special attention to discourses, narratives, and story telling as containing within themselves axiological and normative aspects. This book presents these discourses as a way of constructing and reconstructing social reality rather than as a means of describing reality from a detached perspective. According to this framework, human activity, well-being, and solidarity with other people should be evoked by us much more than any reference to God, the Truth, or absolute Values. This book is written for anyone with interests in American philosophy, intellectual history, or political philosophy.

Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles

National Research Council, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee on the Assessment of Technologies for Improving Fuel Economy of Light-Duty Vehicles, Phase 2, 2015-09-28

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials, and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics, and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies, how will they work, and will some technologies be more effective than others?

Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. **Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles** estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030.
