Venieris, 2013-11-27 Convergence proposes the enhancement of the Internet with a novel content centric publish subscribe service model based on the versatile digital item VDI a common container for all kinds of digital content including digital representations of real world resources VDIs will serve the needs of the future Internet providing a homogeneous method for handling structured information incorporating security and privacy mechanisms CONVERGENCE subsumes the following areas of research definition of the VDI as a new fundamental unit of distribution and transaction content centric networking functionality to complement or replace IP address based routing security and privacy protection mechanisms open source middleware including a community dictionary service to enable rich semantic searches applications tested under real life conditions This book shows how CONVERGENCE allows publishing searching and subscribing to any content Creators can publish their content by wrapping it and its descriptions into a VDI setting rights for other users to access this content monitor its use and communicate with people using it they may even update or revoke content previously published Access to content is more efficient as search engines exploit VDI metadata for indexing and the network uses the content name to ensure users always access the copy closest to them Every node in the network is a content cache handover is easy multicast is natural peer to peer is built in time space decoupling is possible Application developers can exploit CONVERGENCE s middleware and network without having to resort to proprietary ad hoc solutions for common supporting functionality Operators can use the network more efficiently better controlling information transfer and related revenues flows Network design operation and management are simplified by integrating diverse functions and avoiding patches and stopgap solutions Whether as a text for graduate students working on the future of the Internet or a resource for practitioners providing e commerce or multimedia services or scientists defining new technologies CONVERGENCE will make a valuable contribution to the future shape of the Internet

Component-Based Software Engineering Ivica Crnkovic, Judith A. Stafford, Heinz W. Schmidt, Kurt Wallnau, 2004-05-26 Component based software engineering CBSE is concerned with the development of software intensive systems from reusable parts components the development of such reusable parts and the maintenance and improvement of systems by means of component replacement and customization Although it holds considerable promise there are still many challenges facing both researchers and practitioners in establishing CBSE as an efficient and proven engineering discipline Six CBSE

workshops have been held consecutively at the most recent six International Conferences on Software Engineering ICSE The premise of the last three CBSE workshops was that the long term success of component based development depends on the viability of an established science and technology foundation for achieving predictable quality in component based systems The intent of the CBSE 2004 symposium was to build on this premise and to provide a forum for more in depth and substantive treatment of topics pertaining to predictability to help establish cross discipline insights and to improve cooperation and mutual understanding The goal of the CBSE 2004 symposium was to discuss and present more complete and mature works and consequently collect the technical papers in published proceedings The response to the Call for Papers was beyond expectations 82 papers were submitted Of those 25 12 long and 13 short were accepted for publication In all 25 cases the papers were reviewed by three to four independent reviewers The symposium brought together researchers and practitioners from a variety of disciplines related to CBSE
