Supplement to Environmental Impact Assessment Larry W. Canter, 1979 **Perspectives on Environmental Impact Assessment** B.D. Clark, A. Gilad, R. Bisset, P. Tomlinson, 2012-12-06 The experience of highly industrialized countries demonstrates that single minded pursuit of economic develop ment is self defeating because by disregarding the other components of what is cxmmonly called the quality of life it creates conditions which are not acceptable to large sectors of the population In the recent past a number of projects for example major darns have had unexpectedly deleterious social envir

onmental and health consequences As a result many government department and agencies are investigating the impacts of specific projects and are examining the role impact analysis could play in project planning The process of environmental impact analysis has been developed tested and institutionalized in several countries The objective of the process is a prior identification and definition of likely environmental impacts of projects such as public works industrial developments and tourist developments as well as the impact of policies and legislative proposals The environmental impact analysis process also includes the definition of alternative courses of action which would achieve comparable economic objectives while eliminating some or all of the detrimental environmental consequences Identification of preventive or precautionary measures which would minimize the unavoidable impacts form an integral part of the process The aim should be for a balanced appraisal in which economic technical social environmental and health aspects are fully evaluated Thus viewed environmental impact analysis emerges as one of the most powerful planning tools for the prevention of environmental pollution and degradation

Megaprojects and Risk Bent Flyvbjerg,Nils Bruzelius,Werner

Rothengatter,2003-02-13 Megaprojects and Risk provides the first detailed examination of the phenomenon of megaprojects It is a fascinating account of how the promoters of multi billion dollar megaprojects systematically and self servingly misinform parliaments the public and the media in order to get projects approved and built It shows in unusual depth how the formula for approval is an unhealthy cocktail of underestimated costs overestimated revenues undervalued environmental impacts and overvalued economic development effects This results in projects that are extremely risky but where the risk is concealed from MPs taxpayers and investors The authors not only explore the problems but also suggest practical solutions drawing on theory experience and hard scientific evidence from the several hundred projects in twenty nations and five continents that illustrate the book Accessibly written it will be the standard reference for students scholars planners economists auditors politicians and interested citizens for many years to come **Maline Creek Flood Control/water**
