Arsenic in drinking water, mainly groundwater, has emerged as an issue of global health concern. During last decade the presence of arsenic in rice, possibly also other food of plant origins, has attained increasing attention. This is particularly true in the Asian countries where the use of high arsenic groundwater as source of irrigation water and drinking water has been flagged as severe health concern. This has been accentuated by elevating arsenic concentrations in deep groundwater recharged from shallow high arsenic groundwater which may have further detrimental effects on public health. Notably China has been in the forefront of research on arsenic biogeochemical cycling, health effects of arsenic, technologies for arsenic removal and sustainable mitigation measures. The Congress has attracted professionals involved in different segments of interdisciplinary research on arsenic in an open forum and strengthened relations between academia, research institutions, government and non governmental agencies, industries and civil society organizations to share an optimal ambience for exchange of knowledge.
