Numerical Modelling of Construction Processes in Geotechnical Engineering for Urban Environment Theodoros Triantafyllidis,2006-02-23 It has become increasingly important particularly in an urban environment to predict soil behaviour and to confine the settlement or deformation of buildings adjacent to construction sites One important factor is the choice of construction procedure for the installation of piles sheet pile walls anchors or for soil improvement techniques ground freezing and tunnelling methods The modelling of construction processes which are frequently associated with large deformations of the soil and with strong changes in the structure of the soil around the construction plant in the case of for example a drill a bit a vibrator or an excavation tool requires sophisticated and new methods in numerical modelling Often the simulation of the construction procedure is neglected in the calculations Such methods are described and discussed in this book as are examples of the methods applied to geotechnical practice field and laboratory testing as well as case studies This volume provides a valuable source of reference for scientists in geotechnical engineering and numerical modelling geotechnical engineers post graduate students construction companies and consultants manufacturers of geotechnical construction plants and software suppliers and developers of geotechnical construction methods Environmental Technology and Innovations Vladimir Kocí,Tomáš Ruml,Phan Dao,Pham Anh Duc,2016-12-19 This book covers a wide range of topics within environmental engineering and technologies including General environmental engineering Clean energy and sustainability Water and wastewater management Public health and environment The application areas range from emerging pollutants of air soil and water environment remediation technologies clean energy and sustainability of biofuels waste to energy water and wastewater management public health and the environment quality and safety of food production to environmental planning and management and policies for cities and regions The papers cover both theory and applications and are focused on a wide range of sectors and problem areas Integral demonstrations of the use of reliability and environmental engineering are provided in many practical applications concerning major technological approaches Environmental Technology and Innovations will be of interest to academics and professionals working in a wide range of industrial governmental and academic sectors including water and waste management energy generation fuel production and use protection of natural heritage industrial ecology man health protection and policy making **Sustainable Practices in**

Environmental Fate of Chemicals Y. Samiullah, 2012-12-06 Concern over the effects of chemicals in the environment has been increasing for many years Environmental contamination by DDT Aldrin Dieldrin mercury PCBs organotins and many other substances are all part of the public consciousness and have led to widespread attention to this topic Some of the concerns have arisen because human health has been affected when contaminants have been consumed via the food chain for instance in the case of Minamata disease in Japan In other cases direct effects on other components of ecosystems have given cause for alarm The toxic effects which any chemical can cause are a function of exposure and innate toxicity i.e. of the ability to reach in sufficient quantity a site where a biological process can be disrupted and of the tendency to cause disruption when it gets there The processes by which chemicals reach sites of toxic action are the subject of this book and are a fundamental consideration in ecotoxicology When a chemical enters the environment e.g. via a spillage or in an effluent it is potentially subject to a wide variety of processes which may eliminate it from the environment completely modify it into a more or less harmful substance or transfer it to another part of the environment The processes involved are complex and highly variable but it is essential to increase our understanding of them *Produced Water* Kenneth Lee, Jerry

Neff, 2011-09-18 A state of the art review of scientific knowledge on the environmental risk of ocean discharge of produced water and advances in mitigation technologies In offshore oil and gas operations produced water the water produced with oil or gas from a well accounts for the largest waste stream in terms of volume discharged Its discharge is continuous during oil and gas production and typically increases in volume over the lifetime of an offshore production platform Produced water discharge as waste into the ocean has become an environmental concern because of its potential contaminant content

Environmental risk assessments of ocean discharge of produced water have yielded different results. For example, several laboratory and field studies have shown that significant acute toxic effects cannot be detected beyond the point of discharge due to rapid dilution in the receiving waters. However, there is some preliminary evidence of chronic sub-lethal impacts in biota associated with the discharge of produced water from oil and gas fields within the North Sea. As the composition and concentration of potential produced water contaminants may vary from one geologic formation to another, this conference also highlights the results of recent studies in Atlantic Canada. **Books in Print Supplement**, 2002 *Biomass*

Processing Technologies Vladimir Strezov, Tim J. Evans, 2014-06-26. This book is a thoroughly up-to-date treatment of all the available technologies for biomass conversion. Each chapter looks at the viability and implementation of each technology with examples of existing equipment and plants. In addition, the text addresses the economics of biomass processing. The book could also be used as a supplementary text for senior undergraduate courses on biomass processing. Features: Provides a concise overview of all currently available biomass processing technologies. Includes relatively recent technologies such as Biochar. Contains numerous industry examples and case studies. Covers the science and technology behind biomass processing as well as the economics, including the effect of carbon taxation. *Thin-Walled Structures J.*

Loughlan, 2018-02-06. This volume contains the papers presented at the Fourth International Conference of Thin-Walled Structures (ICTWS4) and contains 110 papers which collectively provide a comprehensive state-of-the-art review of the progress made in research, development, and manufacture in recent years in thin-walled structures. The presentations at the conference had representation from 35 different countries, and their topical areas of interest included aeroelastic response, structural acoustic coupling, aerospace structures, analysis, design, manufacture, cold-formed structures, cyclic loading, dynamic loading, crushing, energy absorption, fatigue, fracture, damage, tolerance, plates, stiffened panels, plated structures, polymer matrix composite members, sandwich structures, shell structures, thin-walled beams, columns, and vibrational response. The range of applications of thin-walled structures has become increasingly diverse, with a considerable deployment of thin-walled structural elements and systems being found in a wide range of areas within Aeronautical, Automotive, Civil, Mechanical, Chemical, and Offshore Engineering fields. This volume is an extremely useful reference volume for researchers and designers working within a wide range of engineering disciplines towards the design, development, and manufacture of efficient thin-walled structural systems. **Fabricate 2024** Bob Sheil, Marilena Skavara, Mette Ramsgaard Thomsen, Phil

Ayres, 2024-04-04. **Fabricate 2024** Creating Resourceful Futures is the fifth volume in the series of Fabricate publications. The first conference, Making Digital Architecture, explored the ways in which technology, design, and industry are shaping the world around us. Since then, we have become finely attuned to the negative impacts of this shaping. The 2024 conference, hosted in Copenhagen, sets focus on the pressing need to develop new models for architectural production that rethink how resource is deployed, its intensity, its socio-ecological origins, and sensitivity to environment. This book features the work of

designers engineers and makers operating within the built environment It documents disruptive approaches that reconsider how fabrication can be leveraged to address our collective and entangled challenges of resource scarcity climate emergency and burgeoning demand Exploring case studies of completed buildings and works in progress together with interviews with leading thinkers this edition of Fabricate offers a plurality of tangible models for design and production that set a creative and responsible course towards resourceful futures
