information resource and Dr Zimmerman is a true data guru Informed by her unique combination of interests Transport the Environment and Security represents a giant leap forward in understanding this previously understudied confluence of forces encompassing topics as diverse as how transportation affects the environment and how security problems can affect transportation Vicki Bier University of Wisconsin Madison US Zimmerman s book is a much needed addition to our scientific understanding of the nexus between environment and security within a transportation context Transportation networks rail and road are the quintessential American lifeline and disruptions through episodic natural hazards terrorist activities or longer term climate changes will have profound changes on society presently and in the future Zimmerman illustrates the synergies between environment transport networks security social justice and urban places in a masterful and thoughtful synthesis that underscores the interdependencies within the transportation infrastructure the nation s vulnerability to transport disruptions and offers ideas for increasing the resilience of the transportation infrastructure It will become a standard reference as we re imagine transport in the 21st century under changing climate security environment and living conditions Susan L Cutter University of South Carolina US Transportation planning and policy making have followed a particular model for more than fifty years Rae Zimmerman begins with the premise that we are in a rut and that the old ways of thinking need to be replaced An enormous amount of evidence is presented that together argues a strong case for the systematic integration of planning for transportation the environment and security While the book does not get us to an integrated process it points us to one and starts us down a creative path A great introduction to the complexities of these relationships Martin Wachs RAND Corporation US Effective means of transport are critical under both normal and extreme conditions but modern transport systems are subject to many diverse demands This path breaking book uniquely draws together the typically conflicting arenas of transport the environment and security and provides collective solutions to their respective issues and challenges From a primarily urban perspective the author illustrates that the fields of transportation environment with an emphasis on climate change and security for both natural hazards and terrorism and their interconnections remain robust areas for policy and planning Synthesizing existing data new analyses and a rich set of case studies the book uses transportation networks as a framework to explore transportation in conjunction with environment security and interdependencies with other infrastructure sectors The US rail transit system ecological corridors cyber security planning mechanisms and the effectiveness of technologies are among the topics explored in detail Case studies of severe and potential impacts of natural hazards accidents and security breaches on transportation are presented These cases support the analyses of the forces on transportation land use and patterns of population change that connect disconnect and reconnect people from their environment and security The book will prove a fascinating and insightful read for academics students and practitioners across a wide range of fields including transport environmental economics environmental management urban planning public policy and terrorism and security

**Policy Options for Reducing Energy Use and Greenhouse Gas Emissions from U.S. Transportation** National Research Council (U.S.). Committee for a Study of Potential Energy Savings and Greenhouse Gas Reductions from Transportation, 2011 It is not intended to model or quantify the impacts of each policy option over time but instead to examine the means by which each influences behavior and the demand for and supply of energy and emissions saving technology particularly in the modes of transportation with the greatest effect on the sector s consumption of petroleum and emissions of GHGs In choosing among policies elected officials must take into account many factors that could not be examined in this study such as the full range of safety economic and environmental implications of their choices therefore the report does not recommend a specific suite of policies to pursue Instead the emphasis is on assessing each policy approach with regard to its applicability across transportation modes and its ability to affect the total amount of energy intensive transportation activity the efficiency of transportation vehicles and GHG emissions characteristics of the sector s energy supply
