Progresses in Artificial Intelligence and Neural Systems Anna Esposito, Marcos Faundez-Zanuy, Francesco Carlo Morabito, Eros Pasero, 2020-07-09 This book provides an overview of the current advances in artificial intelligence and neural nets Artificial intelligence AI methods have shown great capabilities in modelling prediction and recognition tasks supporting human machine interaction At the same time the issue of emotion has gained increasing attention due to its relevance in achieving human like interaction with machines The real challenge is taking advantage of the emotional characterization of humans interactions to make computers interfacing with them emotionally and socially credible The book assesses how and to what extent current sophisticated computational intelligence tools might support the multidisciplinary research on the characterization of appropriate system reactions to human emotions and expressions in interactive scenarios Discussing the latest recent research trends innovative approaches and future challenges in AI from interdisciplinary perspectives it is a valuable resource for researchers and practitioners in academia and industry *Emotion Recognition* Amit Konar, Aruna Chakraborty, 2015-01-27 A timely book containing foundations and current research directions on emotion recognition by facial expression voice gesture and biopotential signals This book provides a comprehensive examination of the research methodology of different modalities of emotion recognition Key topics of discussion include facial expression voice and biopotential signal based emotion recognition Special emphasis is given to feature selection feature reduction classifier design and multi modal fusion to improve performance of emotion classifiers Written by several experts the book includes several tools and techniques including dynamic Bayesian networks neural nets hidden Markov model rough sets type 2 fuzzy sets support vector machines and their applications in emotion recognition by different modalities The book ends with a discussion on emotion recognition in automotive fields to determine stress and anger of the drivers responsible for degradation of their performance and driving ability There is an increasing demand of emotion recognition in diverse fields including psycho therapy bio medicine and security in government public and private agencies The importance of emotion recognition has been given priority by industries including Hewlett Packard in the design and development of the next generation human computer interface HCI systems Emotion Recognition A Pattern Analysis Approach would be of great interest to researchers graduate students and practitioners as the book Offers both foundations and advances on emotion recognition in a single volume Provides a thorough and insightful introduction to the subject by utilizing computational tools

of diverse domains Inspires young researchers to prepare themselves for their own research Demonstrates direction of future research through new technologies such as Microsoft Kinect EEG systems etc Lexical Nonmanuals in German Sign Language Nina-Kristin Pendzich,2020-05-05 The book presents an empirical and theoretical investigation of lexical nonmanuals in German Sign Language including torso head and facial expressions Three empirical studies demonstrate the relevance of nonmanuals for the wellformedness of signs their meaning and lexical processing Moreover implications for the theoretical implementation of lexical nonmanuals concerning e g articulation patterns and phonological status are discussed

Computational Techniques for Human Smile Analysis Hassan Ugail,Ahmad Ali Asad Aldahoud,2019-04-17 In this book the authors discuss the recent developments in computational techniques for automated non invasive facial emotion detection and analysis with particular focus on the smile By way of applications they discuss how genuine and non genuine smiles can be inferred how gender is encoded in a smile and how it is possible to use the dynamics of a smile itself as a biometric feature It is often said that the face is a window to the soul Bearing a metaphor of this nature in mind one might find it intriguing to understand if any how the physical behavioural as well as emotional characteristics of a person could be decoded from the face itself With the increasing deductive power of machine learning techniques it is becoming plausible to address such questions through the development of appropriate computational frameworks Though there are as many as over twenty five categories of emotions one could express regardless of the ethnicity gender or social class across humanity there exist six common emotions namely happiness sadness surprise fear anger and disgust all of which can be inferred from facial expressions Of these facial expressions the smile is the most prominent in social interactions The smile bears important ramifications with beliefs such as it makes one more attractive less stressful in upsetting situations and employers tending to promote people who smile often Even pockets of scientific research appear to be forthcoming to validate such beliefs and claims e g the smile intensity observed in photographs positively correlates with longevity the ability to win a fight and whether a couple would stay married Thus it appears that many important personality traits are encoded in the smile itself Therefore the deployment of computer based algorithms for studying the human smiles in greater detail is a plausible avenue for which the authors have dedicated the discussions in this book **Development of Multimodal Interfaces: Active**

Listening and Synchrony Anna Esposito,Nick Campbell,Carl Vogel,Amir Hussain,Anton Nijholt,2010-04-09 The themes of the papers presented in this book emphasize theoretical and practical issues for modelling human machine interaction ranging from the attempt in describing the spacing and orientation in co present interaction to the effort for developing multimodal interfaces collecting and analysing interaction data and emergent behaviour as well as analysing the use of nonverbal and pragmatic elements of exchanges implementing discourse control and virtual agents and using active listening in computer speech processing **What Predicts Divorce?** John Gottman,2023-09-11 In its original volume first published in 1993 John Gottman details years of research involving questionnaires and observations of married couples in pursuit of the

determinants of both marital happiness and divorce Grounded in science and informed by clinical practice it offers psychological professional insight and awareness of what healthy relationships need With a new preface by the Gottman Institute Clinical Director Dr Don Cole and Research Director Dr Carrie Cole this Classic Edition of the landmark text *What Predicts Divorce* reveals to a new generation the original context of Gottman's work how he has further developed his research and thinking and the ongoing relevance of this volume in the context of future challenges for the field Providing a roadmap that gives shape to the science yet to be done this Classic Edition of *What Predicts Divorce* is essential reading for all family and clinical psychologists as well as therapists working with couples in relationship counselling

Collier,Gary James Collier,2014-01-14 First published in 1985 The purpose of this book is to draw together research on one aspect of verbal and nonverbal communication emotional expression The focus is on verbal and nonverbal behaviors associated with emotions A distinction is made between expressive behaviors that occur spontaneously during emotions often without a person s awareness or control and more deliberate forms of communication where the person manipulates verbal and nonverbal cues in order to create an impression The difference between expression and communication is introduced in Chapter 1 and developed throughout the book

Humor and Horror Lena Straßburger,2022-03-07 Despite their opposite emotional effects humor and horror are highly similar phenomena They both can be traced back to the detection resolution and emotional elaboration of incongruities understood as semantic violations through unexpected combinations of oppositional information However theoretical and experimental comparisons between humor and resolvable incongruities that elicit other emotions than exhilaration have been lacking so far To gain more insights into the linguistic differences between humor and horror and the cognitive real time processing of both a main concern of this book is to discuss the transferability of linguistic humor theories to a systematic horror investigation and directly compare self paced reading times SPR facial actions FACS and event related brain potentials ERP of normed minimal quadruplets with frightening and humorous incongruities as well as in coherent stimuli The results suggest that humor and horror share cognitive resources to detect and resolve incongruities To better distinguish humor from neighboring phenomena this book refines current humor theories by incorporating humor and horror in a cognitive incongruity processing model
