Advanced Data Mining and Applications Longbing Cao, Yong Feng, Jiang Zhong, 2010-11-18 With the ever growing power of generating transmitting and collecting huge amounts of data information overload is now an imminent problem to mankind. The overwhelming demand for information processing is not just about a better understanding of data but also a better usage of data in a timely fashion. Data mining or knowledge discovery from databases is proposed to gain insight into aspects of data and to help people make informed sensible and better decisions. At present growing attention has been paid to the study development and application of data mining. As a result there is an urgent need for sophisticated techniques and tools that can handle new fields of data mining e.g. spatial data mining, biomedical data mining and mining on high speed and time variant data streams. The knowledge of data mining should also be expanded to new applications. The 6th International Conference on Advanced Data Mining and Applications ADMA 2010 aimed to bring together the experts on data mining throughout the world. It provided a leading international forum for the dissemination of original research results in advanced data mining techniques, applications, algorithms, software and systems and different applied disciplines. The conference attracted 361 online submissions from 34 different countries and areas. All full papers were peer reviewed by at least three members of the Program Committee composed of international experts in data mining fields. A total number of 118 papers were accepted for the conference. Amongst them 63 papers were selected as regular papers and 55 papers were selected as short papers.
