The notebook page is filled with handwritten text. At the top, there is a heading that appears to be "Myself". Below this, there are several lines of text, some of which are underlined. On the right side of the page, there is a small, simple drawing of a person's head and shoulders, facing forward. The drawing is done in a sketchy, expressive style. The overall appearance of the page is that of a personal journal or a sketchbook.

Ultrasonic Destruction of Surfactants L. Weavers, J. Frim, J. Rathman, G. Pee, 2003-12-01 This research focused on the use of sonication to destroy surfactants and surface tension properties in industrial wastewaters that affect traditional water treatment processes We have investigated the sonochemical destruction of surfactants and a chelating agent to understand the release of metals from surfactants during sonication In addition the effects of physical properties of surfactants and the effect of ultrasonic frequency were investigated to gain an understanding of the factors affecting degradation Successful partial or total destruction of surfactants resulting in the release of metals bound to surfactants may result in a significant cost savings of treatment plants

Savannah Harbor Expansion Project Chatman County, Georgia and Jasper County, South Carolina United States. Office of the Assistant Secretary of the Army (Civil Works), 2013 *Reducing Peak RDII Flow Rates* S. Merrill, 2003-06-30 The purpose of this research project was to examine construction projects that successfully reduced Rainfall Dependent Infiltration Inflow RDII The research began with a literature review of all published records describing RDII removal projects Initially the review identified many projects however subsequent evaluation of available information revealed several important realities First most RDII removal projects in the country go undocumented Second of the RDII removal project summaries that have been

published few provide good data Third data gathering and analyses for this report were hampered by lack of documentation lost or unavailable monitoring data and weaknesses in monitoring techniques Projects with sufficient information describing the conditions before the RDII removal project received a detailed analysis In all the case studies from the six agencies presented in this report 1 document before and after RDII levels 2 quantify the RDII reduction achieved and 3 describe the cost effectiveness of the removal As more than one project was documented for some agencies a total of 12 RDII projects received review The projects examined include both those that successfully reduced RDII and those that did not In general the conclusion was that utilities run the risk of not removing significant RDII unless they address private sewer laterals The only cases examined where significant RDII was removed were those that addressed private sewers or inflow sources A major recommendation of this report was to establish a standard reporting protocol for documenting RDII removal projects This protocol details what specific information should be provided when documenting an RDII removal project and how to perform an evaluation of RDII removal effectiveness The protocol touches on issues ranging from flow meter maintenance to statistical analysis of flow data By using the proper documentation recommended in this report communities allow others who are preparing to perform similar work to examine and utilize the results of any RDII removal project This publication can also be purchased and downloaded via Pay Per View on Water Intelligence Online click on the Pay Per View icon below

Protocols to Assess the Breakdown of Flushable Consumer Products Drew C. McAvoy, G. A. Rece, E. L. Schwab, B. A. Nuck, N. R. Itrich, R. C. Stark, 2003-07-31 A scientifically sound approach is needed to ensure that flushable consumer products are compatible with household plumbing fixtures as well as wastewater collection and treatment systems In addition to assessing disposal system compatibility an assessment approach should also ensure that flushable consumer products do not become an aesthetic nuisance in surface waters and soil environments This document presents an overall approach for assessing the fate and compatibility of consumer products in wastewater disposal systems While the focus of this document is on the United States it is believed that the conceptual approach and many of the test methods could be used to assess the compatibility of flushable consumer products in wastewater disposal systems throughout the world *Biology and Management of Invasive Quagga and Zebra Mussels in the Western United States* Wai Hing Wong, Shawn L. Gerstenberger, 2015-05-07 Biology and Management of Invasive Quagga and Zebra Mussels in the Western United States is a synthesis of the biology and management of invasive mussels from scientists and managers working on invasive quagga and zebra mussels in the western United States Invasive dreissenid mussels have spread throughout southwestern United States at unprecedented **Use of Enhanced Biological Phosphorus Removal for Treating Nutrient-Deficient Wastewater** W. F. Harper Jr, David Jenkins, 2004-01-01 Anaerobic aerobic AnA and completely aerobic CA laboratory scale sequencing batch reactors operating on an acetate and casamino acids based synthetic wastewater were used to investigate the suitability of the AnA process for treating nutrient deficient wastewaters in plants that have stringent effluent nutrient requirements Of

particular interest is the case where phosphorus P deficient wastewaters with highly variable influent COD loading are being treated to meet both effluent TSS and P limits At a 4 d mean cell residence time AnA activated sludge had an approx 20% lower P requirement than CA activated sludge The difference between the end of aerobic cycle polyhydroxyalkanoate and carbohydrate contents of the sludges indicated that the AnAsludge used more influent carbon than the CA sludge for synthesis of non P containing storage products The nitrogen requirements of AnA sludge were similar to those of the CA sludge The AnA and CA SBRs were subjected to three different transient influent COD loading patterns that simulated 1 daily COD Loading fluctuations 2 low weekend COD loading and 3 extended low COD loading periods During the Loading Pattern 1 experiment the average effluent soluble P concentrations for the AnA and CA SBRs were 0.4 and 1.0 mgP/L respectively and complete removal of influent acetate was observed During the Loading Pattern 2 experiment the average effluent soluble P concentrations for the AnA and CA SBRs were 0.3 and 0.9 mgP/L respectively but effluent acetate was detected during the first high COD loading cycle following the low weekend COD loading period During the Loading Pattern 3 experiment the VSS content of both reactors dropped sharply effluent acetate breakthrough occurred and effluent P concentrations exceeding 1 mgP/L were detected in both the AnA and CA SBRs Based on these findings the AnA process has potential as a technologically and economically superior alternative for wastewater treatment plants treating P deficient wastewaters to meet stringent effluent TSS and P limits This publication can also be purchased and downloaded via Pay Per View on Water Intelligence Online click on the Pay Per View icon below

Identifying and Controlling Municipal Wastewater Odor Phase II Gregory M. Adams, Jay Witherspoon, 2004-03-01 This project was undertaken in response to needs by the wastewater treatment industry to better understand the generation of odors from biosolids produced by wastewater treatment plants WWTPs Its primary objective is to begin to establish relationships

between WWTP process parameters and biosolids odors so that more effective techniques for minimizing biosolids odors can be developed. The project consisted of a detailed field study involving extensive sampling and analyses at 11 WWTPs across North America with capacities from 13 to 350 million gallons per day mgd. Biosolids samples were collected from the WWTPs at a number of sampling points which were chosen to represent a complete snapshot of biosolids generation and handling at each WWTP. The sampling points started with influent wastewater, proceeded through primary and secondary clarification and continued through digestion, dewatering and onsite storage of dewatered biosolids cake. Laboratory scale anaerobic storage tests were conducted to simulate odor development of biosolids in storage prior to their beneficial reuse or disposal. A battery of analyses were performed on the biosolids samples by the participating utility laboratories, commercial laboratories and specialized university laboratories. The analytical data were evaluated and compared with process and operation parameters at each participating WWTP.

Navigating the TMDL Process Paul L. Freedman, 2003-12-01. Narrative water quality criteria are an integral component of States water quality standards but they pose special problems when incorporated into the TMDL process. The TMDL process is typically a quantitative activity defining numeric allowable loads necessary to meet a numeric water quality objective. Narrative criteria confound development of quantitative TMDLs due to the absence of these numeric criteria. The objective of this research was to improve the methods for addressing narrative water quality criteria in the TMDL process. The problems associated with narrative criteria in the TMDL process are known in general terms but prior to this research there has not been a thorough review of the use of narrative criteria in TMDLs nor broad guidance on how to address narrative criteria in the TMDL process. The approach taken for this research was to define the range of problems associated with all types of narrative criteria by means of a comprehensive review of 120 narrative TMDLs and provide guiding principles to help address these problems.
