Gerstner,2013-02-15 Contemporary media authorship is frequently collaborative participatory non site specific or quite simply goes unrecognized In this volume media and film scholars explore the theoretical debates around authorship intention and identity within the rapidly transforming and globalized culture industry of new media Defining media broadly across a range of creative artifacts and production cultures from visual arts to videogames from textiles to television contributors consider authoring practices of artists designers do it yourselfers media professionals scholars and others Specifically they ask What constitutes media and authorship in a technologically converged globally conglomerated multiplatform environment for the production and distribution of content What can we learn from cinematic and literary models of authorship and critiques of those models with regard to authorship not only in television and recorded music but also interactive media such as videogames and the Internet How do we conceive of authorship through practices in which users generate content collaboratively or via appropriation What institutional prerogatives and legal debates around intellectual property rights fair use and copyright bear on concepts of authorship in new media By addressing these issues Media Authorship demonstrates that the concept of authorship as formulated in literary and film studies is reinvigorated contested remade even reauthored by new practices in the digital media environment *The Handbook of Interior Design* Jo Ann Asher Thompson,Nancy Blossom,2015-02-09 THE HANDBOOK OF INTERIOR DESIGN The Handbook of Interior Design offers a compilation of current works that inform the discipline of interior design These examples of design scholarship present a detailed overview of current research and critical thinking The volume brings

together a broad range of essays from an international group of scholars who represent the diversity of work in the field. Intended to engage those involved in the study and practice of interior design, the Handbook considers the connections between theory, research and practice that shape the field of interior design as well as the theoretical perspectives that inform the field. It contains over thirty essays which together demonstrate the wide range of opinions and knowledge in the discipline, grouped in sections to reflect key components of their content. A close reading of the essays will uncover contradictory as well as supporting positions on aspects of interior design, challenging the reader to think critically and develop a personal stance toward the subject.

3D Geo-Information Sciences Jiyeong Lee, Siyka Zlatanova, 2008-10-24. In recent years, 3D geo information has become an important research area due to the increased complexity of tasks in many geo scientific applications such as sustainable urban planning and development, civil engineering risk and disaster management and environmental monitoring. Moreover, a paradigm of cross application merging and integrating of 3D data is observed. The problems and challenges facing today's 3D software generally application oriented focus almost exclusively on 3D data transportability issues: the ability to use data originally developed in one modelling/visualisation system in other and vice versa. Tools for elaborated 3D analysis, simulation and prediction are either missing or when available, dedicated to specific tasks. In order to respond to this increased demand, a new type of system has to be developed. A fully developed 3D geo information system should be able to manage 3D geometry and topology, to integrate 3D geometry and thematic information to analyze both spatial and topological relationships and to present the data in a suitable form. In addition to the simple geometry types like point, line and polygon, a large variety of parametric representations, freeform curves and surfaces or sweep shapes have to be supported. Approaches for seamless conversion between 3D raster and 3D vector representations should be available; they should allow analysis of a representation most suitable for a specific application.

Introduction to Engineering Quamrul H. Mazumder, 2018-09-03. Developed for the Ultimate Introductory Engineering Course, *Introduction to Engineering: An Assessment and Problem Solving Approach* incorporates experiential and problem and activity based instruction to engage students and empower them in their own learning. This book compiles the requirements of ABET, the organization that accredits most US engineering, computer science and technology programs and equivalency evaluations to international engineering programs and integrates the educational practices of the Association of American Colleges and Universities (AACU). The book provides learning objectives aligned with ABET learning outcomes and AACU high impact educational practices. It also identifies methods for overcoming institutional barriers and challenges to implementing assessment initiatives. The book begins with an overview of the assessment theory, presents examples of real world applications and includes key assessment resources throughout.
