model building and post implementation with comprehensive guidance on various learning techniques and the data types utilized by each. These techniques are effective for fraud detection across industry boundaries including applications in insurance fraud, credit card fraud, anti money laundering, healthcare fraud, telecommunications fraud, click fraud, tax evasion and more, giving you a highly practical framework for fraud prevention. It is estimated that a typical organization loses about 5% of its revenue to fraud every year. More effective fraud detection is possible, and this book describes the various analytical techniques your organization must implement to put a stop to the revenue leak. Examine fraud patterns in historical data. Utilize labeled, unlabeled, and networked data. Detect fraud before the damage cascades. Reduce losses, increase recovery, and tighten security. The longer fraud is allowed to go on, the more harm it causes. It expands exponentially, sending ripples of damage throughout the organization and becomes more and more complex to track, stop, and reverse. Fraud prevention relies on early and effective fraud detection enabled by the techniques discussed here. *Fraud Analytics Using Descriptive, Predictive, and Social Network Techniques* helps you stop fraud in its tracks and eliminate the opportunities for future occurrence.
