Advisory Committee on Human Radiation Experiments: Sources and documentation United States. Advisory Committee on Human Radiation Experiments, 1995 **Final Report: Sources and documentation** United States. Advisory Committee on Human Radiation Experiments, 1995 Scientists in the Classroom J. Rudolph, 2002-05-02 During the 1950s leading American scientists embarked on an unprecedented project to remake high school science education Dissatisfaction with the soft school curriculum of the time advocated by the professional education establishment and concern over the growing technological sophistication of the Soviet Union led government officials to encourage a handful of elite research scientists fresh from their World War II successes to revitalize the nations science curricula In *Scientists in the Classroom* John L Rudolph argues that the Cold War environment long neglected in the history of education literature is crucial to understanding both the reasons for the public acceptance of scientific authority in the field of education and the nature of the curriculum materials that were eventually produced Drawing on a wealth of previously untapped resources from government and university archives Rudolph focuses on the National Science Foundation supported curriculum projects initiated in 1956 What the historical record reveals according to Rudolph is that these materials were designed not just to improve American science education but to advance the professional interest of the American scientific community in the postwar period as well

The Life, Science and Times of Lev Vasilevich Shubnikov L. J. Reinders, 2018-02-27 This book describes the life times and science of the Soviet physicist Lev Vasilevich Shubnikov 1901 1937 From 1926 to 1930 Shubnikov worked in Leiden where he was the co discoverer of the Shubnikov De Haas effect After his return to the Soviet Union he founded in Kharkov in Ukraine the first low temperature laboratory in the Soviet Union which in a very short time became the foremost physics institute in the country and among other things led to the discovery of type II superconductivity In August 1937 Shubnikov together with many of his colleagues was arrested and shot early in November 1937 This gripping story gives deep insights into the pioneering work of Soviet physicists before the Second World War as well as providing much previously unpublished information about their brutal treatment at the hands of the Stalinist regime **Data Integration in the Life Sciences** Patrick Lambrix, Graham Kemp, 2010-08-11 The development and increasingly widespread deployment of high throughput experimental methods in the life sciences is giving rise to numerous large complex and valuable data resources This foundation of experimental data underpins the systematic study of organisms and diseases which increasingly depends on the development of models of biological systems The development of these models often requires integration of diverse experimental data resources once constructed the models themselves become data and present new integration challenges for tasks such as interpretation validation and comparison The *Data Integration in the Life Sciences* DILS Conference series brings together data and knowledge management researchers from the computer science research community with bioinformaticians and computational biologists to improve the understanding of how emerging data

integration techniques can address requirements identified in the life sciences DILS 2010 was the seventh event in the series and was held in Gothenburg Sweden during August 25-27 2010 The associated proceedings contain 14 peer reviewed papers and 2 invited papers The sessions addressed ontology engineering and in particular evolution matching and debugging of ontologies a key component for semantic integration Web services as an important technology for data integration in the life sciences data and text mining techniques for discovering and recognizing biomedical entities and relationships between these entities and information management introducing data integration solutions for different types of applications related to cancer systems biology and microarray experimental data and an approach for integrating ranked data in the life sciences

[Vision of Life](#) Lily E. Kay, 1993 This fascinating study examines the rise of American molecular biology to disciplinary dominance focusing on the period between 1930 and the elucidation of DNA structure in the mid 1950s Research undertaken during this period with its focus on genetic structure and function endowed scientists with then unprecedented power over life By viewing the new biology as both a scientific and cultural enterprise Lily E Kay shows that the growth of molecular biology was a result of systematic efforts by key scientists and their sponsors to direct the development of biological research

toward a shared vision of science and society She analyzes the motivations and mechanisms empowering this vision by focusing on two key institutions Caltech and its sponsor the Rockefeller Foundation Her study explores a number of vital sometimes controversial topics among them the role of private power centers in shaping scientific agenda and the political dimensions of pure research It also advances a sobering argument the cognitive and social groundwork for genetic engineering and human genome projects was laid by the American architects of molecular biology during these early decades of the project This book will be of interest to molecular biologists historians sociologists and the general reader alike
