Super Courses Ken Bain,2021-03-09 An exploration of some of the most intriguing college teachers pedagogy challenging traditional learning environments *The Best Class You Never Taught* Alexis Wiggins,2017-09-27 The best classes have a life of their own powered by student led conversations that explore texts ideas and essential questions In these classes the teacher s role shifts from star player to observer and coach as the students Think critically Work collaboratively Participate fully Behave ethically Ask and answer high level questions Support their ideas with evidence and Evaluate and assess their own work The Spider Web Discussion is a simple technique that puts this kind of class within every teacher s reach The name comes from the weblike diagram the observer makes to record interactions as students actively participate in the discussion lead and support one another s learning and build community It s proven to work across all subject areas and with all ages and you only need a little know how a rubric and paper and pencil to get started As students practice Spider Web Discussion they become stronger communicators more empathetic teammates better problem solvers and more independent learners college and career ready skills that serve them well in the classroom and beyond Educator Alexis Wiggins provides a step by step guide for the implementation of Spider Web Discussion covering everything from introducing the technique to creating rubrics for discussion self assessment to the nuts and bolts of charting the conversations and using the data collected for formative assessment She also shares troubleshooting tips ideas for assessment and group grading and the experiences of real teachers and students who use the technique to develop and share content knowledge in a way that s both revolutionary and truly inspiring *Data Integration in the Life Sciences* Naveen Ashish,Jose-Luis Ambite,2015-07-07 This book constitutes the proceedings of the 11th International Conference on Data Integration in the Life Sciences DILS 2015 held in Los Angeles CA USA in July 2015 The 24 papers presented in this volume were carefully reviewed and selected from 40 submissions They are organized in topical sections named data integration technologies ontology and knowledge engineering for data integration biomedical data standards and coding medical research applications and graduate student consortium

Genes, Brains, and Human Potential Ken Richardson,2017-03-21 For countless generations people have been told that their potential as humans is limited and fundamentally unequal The social order they have been assured is arranged by powers beyond their control More recently the appeal has been to biology specifically the genes brain sciences the concept of intelligence and powerful new technologies Reinforced through the authority of science and a growing belief in bio determinism the ordering of the many for the benefit of a few has become more entrenched Yet scientists are now waking up to the influence of ideology on research and its interpretation In *Genes Brains and Human Potential* Ken Richardson illustrates how the ideology of human intelligence has infiltrated genetics brain sciences and psychology flourishing in the vagueness of basic concepts a shallow nature versus nurture debate and the overhyped claims of reductionists He shows how ideology more than pure science has come to dominate our institutions especially education encouraging fatalism about the

development of human intelligence among individuals and societies Genes Brains and Human Potential goes much further building on work being done in molecular biology epigenetics dynamical systems evolution theory and complexity theory it maps a fresh understanding of intelligence and the development of human potential Concluding with an upbeat message for human possibilities this synthesis of diverse perspectives will engender new conversations among students researchers and other interested readers

Handbook of Popular Culture and Biomedicine Arno Görge, German Alfonso Nunez, Heiner Fangerau, 2018-09-10 This handbook explores the ways biomedicine and pop culture interact while simultaneously introducing the reader with the tools and ideas behind this new field of enquiry From comic books to health professionals from the arts to genetics from sci fi to medical education from TV series to ethics it offers different entry points to an exciting and central aspect of contemporary culture how and what we learn about and from scientific knowledge and its representation in pop culture Divided into three sections the handbook surveys the basics the micro and the macroaspects of this interaction between specialized knowledge and cultural production After the introduction of basic concepts of and approaches to the topic from a variety of disciplines the respective theories and methods are applied in specific case studies The final section is concerned with larger social and historical trends of the use of biomedical knowledge in popular culture Presenting over twenty five original articles from international scholars with different disciplinary backgrounds this handbook introduces the topic of pop culture and biomedicine to both new and mature researchers alike The articles all complete with a rich source of further references are aimed at being a sincere entry point to researchers and academic educators interested in this somewhat unexplored field of culture and biomedicine

Life Science Careers Jasna Markovac, Kim E. Barrett, Howard Garrison, 2024-05-09 This book is written for the many Life Science PhD students who may pursue careers outside of academic research Even though the biggest portion of students will ultimately pursue other paths university education trains them mostly for the academic track Students often miss information resources contacts or opportunities to explore other options In response the editors assembled a diverse group of authors from all fields related to Life Science research The chapters offer a peek behind the curtain of each industry and offer guidance on how to move towards such roles Through a high level of uniformity students will get a plethora of career stories each providing job opportunities job descriptions resources and useful contact information The purpose of this volume is to illustrate the many excellent opportunities that are available to life science PhDs which will still allow them to make significant contributions to science

Brain-immune interactions in health and disease Adam Denes, Jaleel A. Miyan, 2015-06-12 Brain immune interactions are essential to maintain health and their dysfunction contributes to diverse human diseases Recent data show that haematopoietic processes and immune organs are under central autonomic control Deficient regulation of inflammatory events contributes to brain diseases whereas acute or chronic brain injury is linked with the development of systemic inflammatory conditions or immunosuppression At present common disorders with high socio economic burden such as

cancer cardiovascular neuroinflammatory and neurodegenerative diseases asthma allergies autism psychiatric conditions and sepsis are believed to be influenced at least in part by the dysfunction of brain immune communication Since the median age of the world's population is increasing rapidly it is expected that the burden of common non communicable diseases will further increase which represents a huge challenge to the health care systems worldwide Thus there is an increasing demand to understand and treat complex diseases many of which are age related and this is not possible unless the fine tuned communication between large systems such as the nervous and the immune system is comprehensively understood Although it is impossible to cover all areas of relevant research in this field papers in this eBook give some insight to a few important aspects of brain immune interactions and their contribution to disease We hope that this collection could stimulate further relevant research and facilitate discussions to support the understanding of the highly complex interactions between the immune system and the brain in health and disease

Science and Engineering for Grades 6-12 National Academies of Sciences, Engineering, and Medicine, National Academy of Engineering, Division of Behavioral and Social Sciences and Education, Board on Science Education, Committee on Science Investigations and Engineering Design Experiences in Grades 6-12, 2019-03-12 It is essential for today's students to learn about science and engineering in order to make sense of the world around them and participate as informed members of a democratic society The skills and ways of thinking that are developed and honed through engaging in scientific and engineering endeavors can be used to engage with evidence in making personal decisions to participate responsibly in civic life and to improve and maintain the health of the environment as well as to prepare for careers that use science and technology The majority of Americans learn most of what they know about science and engineering as middle and high school students During these years of rapid change for students knowledge attitudes and interests they can be engaged in learning science and engineering through schoolwork that piques their curiosity about the phenomena around them in ways that are relevant to their local surroundings and to their culture Many decades of education research provide strong evidence for effective practices in teaching and learning of science and engineering One of the effective practices that helps students learn is to engage in science investigation and engineering design Broad implementation of science investigation and engineering design and other evidence based practices in middle and high schools can help address present day and future national challenges including broadening access to science and engineering for communities who have traditionally been underrepresented and improving students educational and life experiences Science and Engineering for Grades 6-12 Investigation and Design at the Center revisits America's Lab Report Investigations in High School Science in order to consider its discussion of laboratory experiences and teacher and school readiness in an updated context It considers how to engage today's middle and high school students in doing science and engineering through an analysis of evidence and examples This report provides guidance for teachers administrators creators of instructional resources and leaders in teacher professional learning on how to support students as they make

sense of phenomena gather and analyze data information construct explanations and design solutions and communicate reasoning to self and others during science investigation and engineering design It also provides guidance to help educators get started with designing implementing and assessing investigation and design

Neuronal Self-Defense: Compensatory Mechanisms in Neurodegenerative Disorders Rosanna Parlato,Pier Giorgio Mastroberardino,2016-02-26 Neurodegenerative disorders are characterized by the progressive loss of specific populations of neurons with consequent deterioration of brain s function and dramatic impact on human behavior At present there are no effective cures for neurodegenerative diseases Because unambiguous diagnosis is possible only after

manifestation of symptoms when a large proportion of neurons has been already lost therapies are necessarily confined to alleviation of symptoms Development of cures halting the disease course is hampered by our rudimentary understanding of the etiopathology Most neurodegenerative disorders are sporadic and age related and even for those of known genetic origin the mechanisms influencing disease onset and progression have not been fully characterized The different diseases however share important similarities in the mechanisms responsible for neuronal loss which is caused by a combination of endogenous and exogenous challenges Trophic deprivation oxidative stress accumulation of abnormal protein aggregates and bioenergetics defects have been described in most if not all neurodegenerative disease To counterbalance these noxious stimuli cells deploy at least during the initial pathogenic states intrinsic neuroprotective responses These are general compensatory mechanisms common to several neurodegenerative conditions which reprogram cellular physiology to overcome stress Adaptation includes strategies to optimize energetic resources for instance reduction of rRNA synthesis to repress translation suppression of transcription and bioenergetics and metabolic redesign Additional mechanisms include potentiation of antioxidant capacity induction of endoplasmic reticulum ER stress and activation of protein quality control systems and autophagy Ineffective execution of these compensatory strategies severely threatens cellular homeostasis and favors onset of pathology Therefore a better understanding of these buffering mechanisms and of their interconnections may help to devise more effective therapeutic tools to prolong neuronal survival and activity independently of the original genetic mutations and stress insults This Research Topic focuses on the initial compensatory responses protecting against failure of those mechanisms that sustain neuronal survival and activity The collection intends to summarize the state of the art in this field and to propose novel research contributes with the ultimate goal of inspiring innovative studies aimed to contrast progression of neurodegenerative diseases

The Women's Liberation Movement and the Politics of Class in Britain

George Stevenson, 2019-02-21 This is the first study of the British Women's Liberation Movement's relationship with class politics It explores the meaning of class to women's liberationists identities and activism both nationally and regionally using a previously neglected feminist cluster in North East England as a case study Stevenson demonstrates that British feminism was shaped fundamentally by its relationship to synthesis with and rejection of class politics Through these processes feminists recognised how post war changes in the economy and gender roles were reshaping class and the Women's Liberation Movement attempted to remake class politics in response However socio economic and cultural class differences between the women involved linked to occupation education and background remained intractable obstacles causing tensions within groups fragmentations into specific class based groups and the ultimate failure of the movement to coalesce into a coherent coalition with labour politics despite great levels of solidarity around particular struggles Examining regional feminism against the national backdrop The Women's Liberation Movement and the Politics of Class in Britain provides an engaging exploration of the fruitful but challenging relationship between British feminism and class politics in a capitalist

society **The Transnational Politics of Higher Education** Meng-Hsuan Chou, Isaac Kamola, Tamson Pietsch, 2016-02-26 This edited volume introduces readers to the relationship between higher education and transnational politics. It shows how higher education is a significant arena for regional and international transformation as well as domestic political struggle replete with unequal power relations. This volume shows the causes and impacts of recent transformations in higher education within a transnational context. Emerging similarities in objectives, institutional set ups and approaches taking place within higher education institutions across different world regions. The asymmetrical relations between various kinds of institutional, commercial and state actors across borders. The extent to which historical and colonial legacies are important in the transformation of higher education. The potential effects these developments have on the current structure of international political order. Drawing on case studies from across the Middle East, Asia, Africa, Latin America and Europe, the contributors develop diverse perspectives explaining the impact of transnational politics on higher education and higher education on transnational politics across time and locality. This book is among the first multi-disciplinary effort to wrestle with the question of how we can understand the political role of higher education and the political force universities exert in the realm of international relations.

Gender and the Quest in British Science Fiction Television Tom Powers, 2016-10-21 The subjects of this book constitute a significant cross section of BBC science fiction television. With such characters as the Doctor, an enigmatic time traveling alien; Kerr Avon, a problematic rebel leader; Dave Lister, a slovenly last surviving human; and Captain Jack Harkness, a complex omnisexual immortal, these shows have both challenged and reinforced viewer expectations about the small screen masculine hero. This book explores the construction of gendered heroic identity in the series from both production and fan perspectives. The paradoxical relationships between the producers, writers and fans of the four series are discussed. Fan fiction, criticism and videos are examined that both celebrate and criticize BBC science fiction heroes and villains.

Posthuman Glossary Rosi Braidotti, Maria Hlavajova, 2018-02-22 If art, science and the humanities have shared one thing, it was their common engagement with constructions and representations of the human. Under the pressure of new contemporary concerns, however, we are experiencing a posthuman condition: the combination of new developments such as the neoliberal economics of global capitalism, migration, technological advances, environmental destruction on a mass scale, the perpetual war on terror and extensive security systems with a troublesome reiteration of old unresolved problems that mean the concept of the human as we had previously known it has undergone dramatic transformations. The *Posthuman Glossary* is a volume providing an outline of the critical terms of posthumanity in present day artistic and intellectual work. It builds on the broad thematic topics of Anthropocene, Capitalocene, eco-sophies, digital activism, algorithmic cultures and security and the inhuman. It outlines potential artistic, intellectual and activist itineraries of working through the complex reality of the posthuman condition and creates an understanding of the altered meanings of art vis-à-vis critical present day developments. It bridges missing links across disciplines, terminologies, constituencies and critical

communities This original work will unlock the terms of the posthuman for students and researchers alike
