Making It Count:

Making It Count Arunabh Ghosh, 2022-01-11 Among the biggest challenges facing leaders of the newly established People's Republic of China PRC was how much they did not know In 1949 at the end of a long sequence of wars the government of one of the largest states in the world committed to fundamentally re engineering its society and economy via socialist planning while having almost no hard reliable statistical data about their own country This book is a history of attempts made to resolve this crisis in counting Drawing on a wealth of official institutional and private sources culled from China India and the United States the author explores the choices made and the effects they engendered through a series of vivid encounters with political leaders professional statisticians academics ordinary statistical workers and even literary figures Early reliance on Soviet inspired methods of enumeration became increasingly untenable in China by the middle of the 1950s A series of unprecedented and unexpected exchanges with Indian statisticians followed as the Chinese sought to learn about the then exciting new technology of random sampling These developments were in turn overtaken by the tumult of the Great Leap Forward 1958 1961 when both probabilistic and exhaustive methods were rejected and statistics was refashioned into an essentially ethnographic enterprise The author argues that this history usually narrowly described as a universal if European history cannot be understood without acknowledging Soviet and Indian influences which not only revises existing models of Cold War science but also globalizes the wider developments in the history of statistics and data For historians of China and social science and political scientists sociologists and anthropologists studying modern China
