### Redesigning the organization with information system

#### 5.1 System as planned organizational change

An information system is a socio-technical entity, an arrangement of both technical and social elements, the introduction of a new information system involves more than new hardware and software. IT also includes changes in jobs skills management and organization. In the socio technical philosophy, one cannot install new technology without considering the people who must work with it. When we design a new information system, we are re-designing organization.

One important thing to know about building a new information system is that this process is one kind of planned organizational change. System builders must understand how a system will affect the organization as a whole, focusing particularly the organizational conflict and changes in the locus of decision making. Managers must also consider how the nature of work group will change under the new system. Systems can be technical successes but organizational failure because of a failure in the social and political process of building the system. Analyst and designer are responsible for ensuring that key participants (members) of the organization participate in the design process are permitted to influence the system ultimate shape.

#### 5.2 Linking Information System to Business Plan

Deciding which new system to build be an essential component of the organizational planning process. Organization need to develop an information systems plan that supports their overall business plan. One specific project have been selected within the overall context of a strategic plan for the nosiness and the systems area, an information system plan can be developed. The plan serves as road map indicating the direction of systems development, the rationale, the current situation, the management strategy, the implementation plan, and the budget.

#### How to develop an Information System Plan

##### 1. Purpose of the plan

Behavioral Consequences of Dynamic Pricing David Prakash,2022-08-19 Digital technologies are driving the application of dynamic pricing Today this pricing strategy is used not only for perishable products such as flights or hotel rooms but for almost any product or service category With dynamic pricing retailers frequently adjust their prices over time to respond to factors such as demand their supply and that of competitors or the time of sale Additionally dynamic pricing allows retailers to take advantage of a large share of consumers willingness to pay while avoiding losses from unsold products Ultimately this can lead to an increase in revenue and profit However the application of dynamic pricing comes with great challenges In addition to the technological implementation companies have to take into account that dynamic pricing can cause complex and unintended behavioral consequences on the consumer side The key objective of this dissertation is to provide a deeper understanding of the impact of dynamic pricing on consumer behavior To this end this dissertation presents insights from four perspectives First how reference prices as a critical component in purchase decisions are operationalized Second how customers search for products priced dynamically differentiated by business and private customers as well as by different devices used for the search Third whether and how dynamic pricing influences the impact of internal reference prices on purchase decisions Finally this dissertation demonstrates that consumers perceive price changes as personalized in different purchase contexts leading to reduced perceptions of fairness and undesirable behavioral consequences
