

Mitosis

How does sexual reproduction lead to genetic variation?

Why?

Cells reproduce through mitosis to make exact copies of the original cell. This is done for growth, and repair. Sexually reproducing organisms have a sexual form of cell division that produces reproductive cells with half the number of chromosomes. This process is called **meiosis**, and without it, humans, oak trees, lizards, and all other sexually reproducing organisms would be exactly identical to their ancestors.

Model 1 - Meiosis I

1. According to Model 1, in what type of organisms are the cells that create gametes?

Cells from the sex organs.
