the fashion and retail industry as consumers demand more ethical and environmentally friendly products. The industry's negative environmental and social impacts are being reduced through these efforts which often create high levels of waste, pollution and exploitation. Technological advancements, shifting values and changing economic and environmental conditions are shaping the future of consumer shopping habits. As the impact of consumers on society and the environment grows and digital innovations alter the way people interact with brands, the retail landscape is expected to change significantly. Further exploration of these sustainable practices may provide improved solutions for environmentally conscious fashion and retail businesses. *Sustainable Practices in the Fashion and Retail Industry* explores the continuing trends of sustainable techniques and practices in the fashion and retail business. It examines how consumer habits are evolving toward more thoughtful, personalized and technology-driven experiences that align with modern values and lifestyles. This book covers topics such as green marketing, social media and circular economy and is a useful resource for business owners, policymakers, entrepreneurs, economists, academicians and researchers.

*Toward an Environmentally Sustainable Future* Qingfeng Zhang, Robert Crooks, 2012-08-01. This publication presents the results of a 2-year effort to update environmental assessment in the People's Republic of China (PRC). The research was a collaborative effort involving the Asian Development Bank (ADB), the Ministry of Environmental Protection, the National Development and Reform Commission, and numerous other technical and research institutions in the PRC. Based on this research and extensive consultations, ADB proposes a wide range of programs and policies that will help improve environmental quality despite new and emerging sources of pollution and challenges to natural resources management. Inclusive growth and a green economy are the government's guiding principles for its development agenda under the 12th Five Year Plan and beyond to 2020. To support these principles, the PRC needs to restructure its economic and fiscal systems to reflect environmental externality, expand the use of market-based instruments to control pollution, and introduce and implement legal reforms to clarify responsibility and promote cooperation.

**Transport Policy and the Environment** David Banister, 2002-09-11. There is currently considerable concern with limiting the growth of transport demand, the use of resources, and related pollution. This book makes a major contribution to the debate on transport and the environment and is likely to become a benchmark against which new research will be developed. *Transport Policy and the Environment* presents for the first time the results of extensive research quantifying the contribution of transport to environmental problems, assessing the options for resolving those problems, investigating the conflicts arising from policy implementation, developing new and better methods of data collection and analysis. It brings together the results of a major research programme funded by the UK Economic and Social Research Council on Transport and the Environment and provides a clear view on current policy. It is the major contribution that UK research has made to the debate and provides the first set of substantive results on the effectiveness of policy and the means by which the impact can be measured and assessed.
