Mammals of the Southeastern United States Troy L. Best, John L. Hunt, 2020-08-25 First comprehensive account of the mammals of the entire southeastern US The southeastern United States is home to a remarkable and diverse mammalian fauna that is a significant part of the region's rich natural heritage *Mammals of the Southeastern United States* presents accounts of 137 species that currently or previously occurred in the Southeast Although accessible and useful for the generalist this book provides an up to date compilation of basic knowledge about native and nonnative mammals of the region that is suitable for students of all ages and for professional mammalogists and biologists alike This volume profiles common species like the eastern gray squirrel the white tailed deer and the Virginia opossum but also includes among its accounts many extant species such as the jaguar and porcupine that once occurred in the region native species like the Caribbean monk seal that are now extinct native species that have been extirpated or wiped out from all or part of the region such as the red wolf cougar American bison and elk and many introduced species including the Mexican mouse opossum common squirrel monkey and capybara Each species account includes full color images of the animal plates featuring at least three views of its skull color distribution maps of its approximate geographic range in the Southeast and in North America and an up to date synthesis of several aspects of its biology including habitat diet predators parasites diseases and behaviors An introductory chapter on conservation summarizes the current status of mammalian populations in the region and provides insight into some of the threats mammals now encounter in the Southeast

The 'Ecosystem Approach' in International Environmental Law Vito De Lucia, 2019-03-28 The ecosystem approach broadly understood as a legal and governance strategy for integrated environmental and biodiversity management has been adopted within a wide variety of international environmental legal regimes and provides a narrative a policy approach and in some cases legally binding obligations for States to implement what has been called a new paradigm of environmental management In this last respect the ecosystem approach is also often considered to offer an opportunity to move beyond the outdated anthropocentric framework underpinning much of international environmental law thus helping re think law in the Anthropocene Against this background this book addresses the question of whether the ecosystem approach represents a paradigm shift in international environmental law and governance or whether it is in conceptual and operative continuity with legal modernity This central question is explored through a combined genealogical and biopolitical framework which reveals how the ecosystem approach is the result of multiple contingencies and contestations and of the interplay of divergent and sometimes irreconcilable ideological projects The ecosystem approach this book shows does not have a univocal identity and must be understood as both signalling the potential for a decisive shift in the philosophical orientation of law and the operationalisation of a biopolitical framework of control that is in continuity with and even intensifies the eco destructive tendencies of legal modernity It is however in revealing this disjunction that the book opens up the possibility of

moving beyond the already tired assessment of environmental law through the binary of anthropocentrism and ecocentrism

Law and Ecology Richard O. Brooks, Ross Jones, 2017-07-05 In 1970 Earth Day was first celebrated marking the dawn of worldwide environmental consciousness and the passing of many environmental laws. In part these events were the result of the maturing of the science of ecology which recognized the interdependence of the web and cycles of nature. This volume explores the relationship between ecology and environmental law beginning with a description of the two very different disciplines. This description is followed by a history of their episodic interactions: the early period of origin, the mid-century formative period from 1950 to 1970, the initial serious period of interaction after Earth Day in 1970, and the testing of the relationship during the next two decades. Utilizing a number of case studies, examinations of the key linkage persons, legal instruments, and the migration of ecological concepts and frameworks, this book analyzes the final flowering of an ecosystem regime which embraces the connections between the two disciplines of ecology and environmental law. Concluding with an inventory of the problems posed by the relationship between the two disciplines and an agenda for future research, this clearly structured, comprehensive, and stringent book is an essential resource for all serious scholars and students of ecology and environmental law.

Ecology and the Biosphere Sharon L. Hanks, 1996-05-01 Here is a valuable one-semester course text for non-science majors that delivers. It is concise, focused on material that will enable students to make intelligent choices about the future of the earth, and written in a style that will enable students to make connections to their own lives. Students want to know how science relates to their lives, how the biosphere works, what is wrong with it, and what they can do to make a difference. Now there is a new text that provides the information students need and gives real-life examples that make the learning process more interesting and relevant.

THREE MAIN DIVISIONS OF TEXT

- 1 What science is and what students need to know about it
- 2 The biosphere: how it works and its current problems
- 3 What students can do about the problems

ABOUT THE AUTHOR: Dr. Sharon LaBonde Hanks teaches biology at William Paterson College in New Jersey. She holds a Ph.D. from Rutgers University. Her 33 years in teaching have concentrated on biology and environmental science, with research focused on ecology, taxonomy, and systematic palynology. She has a special interest in writing about the discipline, assessment, and race/gender issues in science. Hanks is the author of a major text on how to teach biology using the process approach. In addition, she runs workshops and is a consultant, an expert perennial gardener, and a naturalized landscaper and an avid student of Tai Chi. She is most proud of her memberships in the New Jersey Audubon, Weis Ecology Center, Habitat for Humanity, and the Nature Conservancy.
