The socioeconomic impacts of large-scale tree plantations on local communities Malkamäki, A., D'Amato, D., Hogarth, N.J., Kanninen, M., Pirard, R., Toppinen, A., Zhou, W., 2017-03-06 Background To meet increasing demand for forest products and services the global area of planted forests has increased dramatically over the past 25 years Further increases in large scale tree plantations are expected due to their high productivity economic profitability and contribution to climate change mitigation targets This raises questions about their long term sustainability as well as their impacts on forest ecosystem services and local livelihoods particularly in countries characterized by rural poverty and insecure property rights Previous studies have revealed mixed impacts but there is a lack of research on the contexts and practices that can contribute to positive and or negative socioeconomic impacts This protocol provides guidelines for a systematic review that synthesizes the current literature on the direct and indirect impacts of large scale plantations on local communities and which will also identify trends bias and gaps in the empirical evidence base Methods

The primary research question of the systematic review asks What are the direct and indirect socioeconomic impacts of large scale tree plantations on local human populations We apply a Population Exposure Comparator Outcome Context PECOC framework to structure each stage of the systematic review which comprises a comprehensive literature search screening quality assessment data extraction and analysis We define the exposure of interest to be the establishment or management of a large scale tree plantation by external actors population of interest as households and communities living in close proximity to plantation sites comparators as other communities who have not experienced the same exposure as well as the same communities prior to plantation establishment outcomes as the direct or indirect socioeconomic impacts felt by the population as a result of plantation establishment and context as the social political and environmental factors that may have led to differences in experienced impacts We will search multiple bibliographic databases and organizational websites for relevant studies in both the published and grey literatures These results will be screened by their titles and abstracts followed by their full texts based on predetermined eligibility criteria To ensure that selected studies have controlled for potential biases quality assessment will then take place alongside data extraction Finally the results of quantitative and qualitative analyses will be reported in a narrative synthesis

Penning-Rowsell, 2021-08-26 Building resilience to the world s increasingly damaging environmental hazards has become a priority This book considers the scientific advances which have been made around the world to enhance this resilience Although resilience is not new it is through the idea of resilience that governments organisations and communities around the world are now seeking to address the rapidly increasing losses that environmental hazards cause so that fewer lives are lost and damage is reduced Alternative ideas and approaches have been helpful in reducing loss but resilience offers a fresh and potentially effective means of reducing it further Adopting a scientific approach and scientific evidence is important in applying the resilience idea in hazard mitigation However the science of resilience is at an immature stage of development with much discussion about the concept and how it should be understood and interpreted Building useful theories remains a challenge although some of the building blocks of theory have been developed More attention has been given to developing indicators and frameworks of resilience which are subsequently applied to measure resilience to hazards such as flooding earthquake and climate change Environmental Hazards and Resilience Theory and Evidence considers the scientific and theoretical challenges of making progress in applying resilience to environmental hazard mitigation and provides examples from around the world including the USA New Zealand China Bangladesh and elsewhere The chapters in this book were originally published in the Environmental Hazards
