Meeting the Challenges to Measurement in an Era of Accountability Henry Braun, 2016-01-29 Under pressure and support from the federal government states have increasingly turned to indicators based on student test scores to evaluate teachers and schools as well as students themselves The focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests such as in mathematics or English language arts with a focus on grades 4-8 Teachers in these subject areas however constitute less than thirty percent of the teacher workforce in a district Comparatively little has been written about the measurement of achievement in the other grades and subjects This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas with particular attention to their use in the evaluation of teachers and schools in all It addresses traditional end of course tests as well as alternative measures such as portfolios exhibitions and student learning objectives In each case issues related to design and development psychometric considerations and validity challenges are covered from both a generic and a content specific perspective The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research based applications of educational measurement and assessment Edited by leading experts these books are comprehensive and practical resources on the latest developments in the field The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

Ovarian Cancer Targeted Medication: PARP Inhibitors, Anti-Angiogenic Drugs, Immunotherapy, and More, volume II Zhaoqian Liu, Jing Wang, Naiyuan Wu, Guang Lei, Zhi-Bin Wang, 2025-02-21 Ovarian cancer is the malignancy with the highest rate of death from tumors of the female reproductive system and the main treatment options are tumor reduction and post surgical platinum based chemotherapy Unfortunately some patients will develop platinum resistance after multiple

recurrences Given that ovarian cancer is a heterogeneous disease with complex molecular and genetic alterations the identification of specific molecular targets will be of great benefit in gaining a deeper understanding of the mechanisms of ovarian cancer development and progression As research into targeted therapies continues the treatment of ovarian cancer is gradually shifting from conventional chemotherapy to targeted therapies Targeted drugs such as PARP inhibitors and anti angiogenic drugs have become important modalities for the maintenance treatment of ovarian cancer At the same time targeted therapy also suffers from ineffective use high rates of adverse reactions and high prices With the development of next generation sequencing technology targeted therapeutic agents developed for specific molecules in ovarian cancer may provide a wider range of treatment options for ovarian cancer patients and offer new strategies for individualized treatment Immunotherapy as well as ferroptosis pathway modulation has also provided new ideas for targeted therapy in ovarian cancer

Advances in Epithelial Ovarian Cancer: Model Systems, Microenvironmental Influences, Therapy, and Origins Viive Maarika Howell, Ben Davidson, TIAN-Li WANG, Christina Annunziata, 2016-02-03 This eBook provides a compendium of the current state of the art in research tools for and understanding of the critical research areas in epithelial ovarian cancer EOC with a strong emphasis on HG SOC Research areas covered include therapy response and development microenvironmental influences and the etiology and progression of EOC Ten articles detail established and novel in vivo and in vitro model systems These include primary and immortalized cell culture in 2D and 3D as well as genetically engineered transgenic spontaneous syngeneic classical xenograft and patient derived xenograft mouse models The generation of genetically engineered mouse models of HG SOC has been a major dilemma as models with the oncogenic aberrations common in the human malignancy do not accurately recapitulate HG SOC Conversely commonly used HG SOC cell lines have been found to not harbor the expected

genetic changes These issues as well as the rapid acceptance of patient derived xenograft models are reviewed Five articles discuss different aspects of the tumor microenvironment including its role in therapy resistance disease progression and metastasis Mutation of BRCA1 2 continues to be the best defined risk factor for HG SOC Three articles discuss BRCA loss in the context of disease development targeted therapies and changes in preventative measures proposed for mutation carriers in light of the recent advances in knowledge regarding the origins of this malignancy An image of HG SOC with reduced BRCA1 expression is featured on the cover image by VM Howell A major clinical issue for patients with HG SOC is the development of therapy resistance Five articles focus on therapy resistance and different ways to overcome resistance Overall this eBook is an outstanding resource to aid researchers design their programs of research and determine the most appropriate and up to date EOC model systems to address their research questions

Exploring Cancer Metabolic Reprogramming through Molecular Imaging Franca Podo,Zaver M. Bhujwalla,Egidio Iorio,2017-07-27 The inclusion of oncogene driven reprogramming of energy metabolism within the list of cancer hallmarks Hanahan and Weinberg Cell 2000 2011 has provided major impetus to further investigate the existence of a much wider metabolic rewiring in cancer cells which not only includes deregulated cellular bioenergetics but also encompasses multiple links with a more comprehensive network of altered biochemical pathways This network is currently held responsible for redirecting carbon and phosphorus fluxes through the biosynthesis of nucleotides amino acids lipids and phospholipids and for the production of second messengers essential to cancer cells growth survival and invasiveness in the hostile tumor environment The capability to develop such a concerted rewiring of biochemical pathways is a versatile tool adopted by cancer cells to counteract the host defense and eventually resist the attack of anticancer treatments Integrated efforts elucidating key mechanisms underlying this complex cancer metabolic reprogramming have led to the identification of new signatures of malignancy that are providing a strong foundation for improving cancer diagnosis and monitoring tumor response to therapy using appropriate molecular imaging approaches In particular the recent evolution of positron emission tomography PET magnetic resonance spectroscopy MRS spectroscopic imaging MRSI functional MR imaging fMRI and optical imaging technologies combined with complementary cellular imaging approaches have created new ways to explore and monitor the effects of metabolic reprogramming in cancer at clinical and preclinical levels Thus the progress of high tech engineering and molecular imaging technologies combined with new generation genomic proteomic and phosphoproteomic methods can significantly improve the clinical effectiveness of image based interventions in cancer and provide novel insights to design and validate new targeted therapies The Frontiers in Oncology Research Topic Exploring Cancer Metabolic Reprogramming Through Molecular Imaging focusses on current achievements challenges and needs in the application of molecular imaging methods to explore cancer metabolic reprogramming and evaluate its potential impact on clinical decisions and patient outcome A series of reviews and perspective articles along with original research contributions on humans and on preclinical models

have been concertedly included in the Topic to build an open forum on perspectives present needs and future challenges of this cutting edge research area Energy Abstracts for Policy Analysis ,1989 Technical Abstract Bulletin ,1981
