After the Borg invasion of 2367, Starfleet searched frantically for ways to shore up their depleted fleet. With the trend of the last 50 years leaning toward larger vessels with multimission support, the rate of starship construction had ground to a crawl. With a new enemy breathing down her neck and new adversaries seemingly at every turn, the fleet decided to return to the past, at least in part. The SSNP Project (Small Starship Development Program) began in the latter half of 2367 at the Utopia Planitia and 40 Eridani Fleet Yards. The initial studies drew upon lessons learned from the *Defiant*/*Pardipliner* project and the recent Borg encounters. From this project would eventually come the *Intrepid*, *Patriot*, *Saint Louis* and *Neomidas*-classes. These would also soon follow the very successful *Spynfire* and *Hurricane*-class destroyers, the epitome of small vessel design.

Classification: The *Spynfire*-class is designated as a short-range tactical support vessel.

Design: The *Spynfire*'s design drew from the scaled-down hull framing and Warp Field Dynamics testing of the *Sovereign*-class which was at the time under development. The starship's single nosecone is suspended over the saucer section with a truncated secondary hull containing the engineering systems, fuel tanks, navigational deflector and shuttle bay.

Engineering: The ultra-efficient PLWR-1 warp drive system mounted on the *Spynfire* allows for very high warp speeds, an impressive warp 9.8 for 12 hours with a cruising speed of warp 7. The twin FIG-2 impulse drive allows for impressive handling at subluminal velocities and makes it suitable for high-speed flanking attacks on enemy formations. The more robust drive systems aboard the *Hurricane* make that vessel more suited to close-in fleet defense and screening duties.

Tactical: The *Spynfire* draws heavily on the *Sovereign*'s tactical systems with a scaled-down quantum torpedo launcher and military operations sensor array. Cosmetically identical, the *Hurricane* and *Spynfire* diverge greatly in their engine configuration and phaser load. While the *Spynfire* boasts a longer-range phaser array and sensor suite, the *Hurricane*'s punch is much heavier up close. They were also fit with an impressive backup-photon torpedo launch capability and rugged shielding.

Crew Support/Computer Systems: Like most vessels designed with short-range support missions in mind, the *Spynfire* is devoid of most luxuries. Its 190-man crew and 25 member Marine complement are well accommodated, but most crew support facilities are assumed to be available during the large amount of time the *Spynfire* spends at port. The standard nonlinear computer system is sufficient for the ship's needs, and no enhancements are planned for the foreseeable future.

Development and Construction History: The *Spynfire* was designed at Starfleet Engineering in San Francisco as a part of the SSNP Project (Small Starship Development Program). Initial construction and fabrication was performed at the Utopia Planitia and 40 Eridani Fleet Yards. Of the 67 units produced, 52 remain in active service. Two *Spynfires*, the *Chivash* and *Alyssere* were destroyed by the Borg at the Battle of Typhon. One, the *USS Salswinder*, is serving with the Starfleet Training Command.
