century approaches to the most recent analyses of the hierarchical structure of cognitive abilities and documents the transition from a hopelessly confused concept of intelligence to the development of an objective measure of psychometric g. The contributions illustrate the impressive power g has with respect to predicting educational achievement, getting an attractive job or social stratification. The book is divided into six parts as follows: Part I presents the most recent higher stream analysis of cognitive abilities; Part II deals with biological aspects of g such as research on brain imaging, glucose uptake, working memory, reaction time, inspection time and other biological correlates and concludes with the latest findings in g-related molecular genetics; Part III addresses demographic aspects of g such as geographic, race and sex differences and introduces differential psychological aspects as well; Part IV concentrates on the g-nexus and relates such highly diverse topics as sociology, genius, retardation, training, education, jobs and crime to g; Part V contains chapters critical of research on g and its genetic relationship and also presents a rejoinder; Part VI looks at one of the greatest contemporary psychologists, Professor Emeritus Arthur R. Jensen, as teacher and mentor.
