Hydraulic Design Guide:

Guide to Bridge Hydraulics Transportation Association of Canada, 2004 Basic hydraulic considerations Channel types and behaviour relation to bridges Basic hydraulic requirements Hydraulic design procedures Hydrologic estimates Statistical frequency analysis Runoff modeling Empirical methods High water levels and stage discharge relations Extreme floods and risk Scour protection and channel control Scour protection around bridge foundations Erosion protection of banks and slopes Design of rock riprap Channel control works Hydraulic aspects of construction inspection and maintenance Construction Inspection Maintenance Special problems Tidal crossings Inland basic crossings Waves and waves protection Physical modeling of bridge problems Alluvial fans Debris flow and torrents *Hydraulic design and management of wastewater transport systems* Michiel Tukker, Kees Kooij, Ivo Pothof, 2016-04-15 Hydraulic Design and Management of Wastewater Transport Systems is a manual resulting from the research project CAPWAT CAPacity loss in wasteWATER pressure pipelines which researched the mechanisms for the creation stagnation and discharge of gas bubbles in wastewater pressure pipelines During this six year research programme it was recognised that there is no hydraulic manual guideline that focuses on the entire wastewater pressure pipeline system the processes it includes and the interaction between the pressure pipeline and the pumping station This manual provides a compilation of all the hydraulic knowledge that is necessary for designing a wastewater transport system and to manage it operationally The wastewater transport system is the link between the collection and treatment of the wastewater and the collection system includes among others the gravity flow sewage system from the house or consumer and service connection through street and main sewers up to the suction basins The transport system for which this manual was written includes the suction basin the sewage pumping station and the pressure pipelines Wastewater transport systems are becoming more complex due to building larger sewage water treatment plants wastewater being transported over greater distances and increasingly more and smaller pipelines connecting to the main sewers The operation of the pumping stations is largely determined by how the entire system behaves Insight into this operation is therefore crucial for proper design and management The central point of the design is to create an independent and safe system with the necessary transport capacity at minimum societal costs Predominantly the management aspect focuses on guidelines to maintain the design principles regarding capacity and required energy Waterway Design, 1994

Recommendations for Standards in Hydraulics American Society of Civil Engineers, 1994-01-01 Prepared by the Task Committee on Recommendations for Standards in Hydraulics of the Hydraulics Division of ASCE This report investigates whether standards or guides are useful to hydraulic engineers and whether additional standards or guides should be prepared The results of a questionnaire indicate that most hydraulic engineers are not familiar with the procedures used to develop standards or with existing national or international standards However responses to the questionnaire show that hydraulic engineers welcome guides or standards as long as some flexibility to use engineering judgment for site specific

conditions is allowed The report recommends that guidelines or consensus standards be developed in the following areas application of one dimensional surface water computer programs of the HEC 2 type prediction of scour at bridge piers design of pump intakes and sumps and calculations of friction and form losses in closed conduits Annotated lists of standards and guidelines produced in the United States and abroad are included
