Inequalities With Applications To Engineering 2nd Edition:

Inequalities Michael J. Cloud, Byron C. Drachman, Leonid P. Lebedev, 2014-05-06 This book offers a concise introduction to mathematical inequalities for graduate students and researchers in the fields of engineering and applied mathematics. It begins by reviewing essential facts from algebra and calculus and proceeds with a presentation of the central inequalities of applied analysis illustrating a wide variety of practical applications. The text provides a gentle introduction to abstract spaces such as metric normed and inner product spaces. It also provides full coverage of the central inequalities of applied analysis such as Young's inequality, the inequality of the means, Hölder's inequality, Minkowski's inequality, the Cauchy-Schwarz inequality, Chebyshev's inequality, Jensen's inequality, and the triangle inequality. The second edition features extended coverage of applications including continuum mechanics and interval analysis. It also includes many additional examples and exercises with hints and full solutions that may appeal to upper level undergraduate and graduate students as well as researchers in engineering, mathematics, physics, chemistry, or any other quantitative science. [Mathematical Principles of the Internet, Volume 2](#) Nirdosh Bhatnagar, 2018-11-21 This two volume set on Mathematical Principles of the Internet provides a comprehensive overview of the mathematical principles of Internet engineering. The books do not aim to provide all of the mathematical foundations upon which the Internet is based. Instead, they cover a partial panorama and the key principles. Volume 1 explores Internet engineering while the supporting mathematics is covered in Volume 2. The chapters on mathematics complement those on the engineering episodes and an effort has been made to make this work succinct yet self-contained. Elements of information theory, algebraic coding theory, cryptography, Internet traffic dynamics, and control of Internet congestion and queueing theory are discussed. In addition, stochastic networks, graph theoretic algorithms, application of game theory to the Internet, Internet economics, data mining, and knowledge discovery, and quantum computation, communication, and cryptography are also discussed. In order to study the structure and function of the Internet, only a basic knowledge of number theory, abstract algebra, matrices, and determinants, graph theory, geometry, analysis, optimization theory, probability theory, and stochastic processes is required. These mathematical disciplines are defined and developed in the books to the extent that is needed to develop and justify their application to Internet engineering.

Geometry and Non-Convex Optimization Panos M. Pardalos, Themistocles M. Rassias, 2025-07-24 This book offers a comprehensive exploration of the dynamic intersection between geometry and optimization. It delves into the intricate study of Hermite-Hadamard inequalities, Hilbert-type integral inequalities, and variational inequalities, providing a rich tapestry of theoretical insights and practical applications. Readers will encounter a diverse array of topics, including the bounds for the unweighted Jensen's gap of absolutely continuous functions and the properties of Barrelled and Bornological locally convex spaces. The volume also covers advanced subjects such as multiobjective mixed integer nonlinear optimization and optimum statistical analysis on sphere surfaces. Contributions from eminent scholars provide a deep dive into C-ternary biderivations.

Erdős Szekeres products and variational principles making this book a must read for those seeking to expand their understanding of these complex fields Ideal for researchers and scholars in mathematics and optimization this volume is an invaluable resource for anyone interested in the latest developments in geometry and nonconvex optimization Whether you are a seasoned academic or a graduate student this book will enhance your knowledge and inspire further research in these fascinating domains
