*Strategic Approach in Multi-Criteria Decision Making* Nolberto Munier, 2024-03-18 This book examines multiple criteria decision making MCDM and presents the Sequential Iterative Modelling for Urban Systems SIMUS as a method to be used for strategic decision making It emphasizes the necessity to take into account aspects related to real world scenarios and incorporating possible real life aspects for modelling The book also highlights the use of sensitivity analysis and presents a method for using criteria marginal values instead of weights which permits the drawing of curves that depicts the variations of the objective function due to increments decrements of criteria values In this way it also gives quantitative values of the objective function allowing stakeholders to perform a comprehensive risk analysis for a solution when it is affected by exogenous variables Strategic Multi Criteria Decision Making A Practical Guide for Complex Scenarios is divided into four parts Part 1 is devoted to exploring the history and development of the discipline and the way it is currently used It highlights drawbacks and problems that scholars have identified in different MCDM methods and techniques Part 2 refers to what can be done using the MCDM process Part 3 proposes the SIMUS method as a strategic procedure to deal with MCDM problems and addressing how to approach complicate scenarios Part 4 is entirely devoted to support practitioners through more than 100 questions a user may ask and their corresponding answers as well as a collection of solved six complex real

life scenarios The decision making process can be a complex task especially with multi criteria problems With large amounts of information it can be an extremely difficult to make a rational decision due to the number of intervening variables their interrelationships potential solutions that might exist diverse objectives envisioned for a project etc The SIMUS method has been designed to offer a strategy to help organize classify and evaluate this information effectively The Crisis of Our Time John Carvalho,2014-07-15 Dr John Carvalho former Harvard academician and winner of the United States National Research Service Award is no stranger to the word crisis As a scientist scholar and statesman he has spent decades working on the front lines of biomedical and theoretical exploration global health and the worldwide human rights movement The Crisis of Our Time is the astonishing partial memoir and discourse regarding his life's career and philosophy concerning the planet's most pressing problems Written in a way accessible to everyone Carvalho beginning with his passionate poetic and provocative first chapter challenges us to discover that the disastrous external crises of our lives emanate from the unity of our conscious and subconscious experiences Indeed the great troubles afflicting humanity war infectious disease economic recession terrorism family discord psychological trauma human rights violations dilemmas that appear unsolvable actually originate when without truthful self reflection we glorify mediocrity rather than strive to excel Employing cutting edge scientific information keen historical insight extensive cultural experience and profound philosophical analysis Carvalho dissects our crises to elucidate why they perpetuate In so doing he introduces his theory of causal circular systems to reveal how causes feed off and exacerbate effects which in turn reinforce those same causes Furthering his views he explores global health the example par excellence as well as economics political history planetary climate change and the most central crisis of all Being or Nothingness the fears of the Self the dread of our mortality Ultimately this short but eye opening book creates epic meaning while using an artistic literary style that is virtually unseen in nonfiction Anyone who genuinely seeks excellence over mediocrity truth over falsity meaning over purposelessness and resolution over despair should read Crisis

**APC Understanding ISC Mathematics - Class 11 - Avichal Publishing Company** M.L. Aggarwal, Understanding ISC Mathematics for class 11 sections A B C has been written by Mr M L Aggarwal Former Head of P G Department of Mathematics D A V College Jalandhar strictly according to the new syllabus prescribed by the Council for the Indian School Certificate Examinations New Delhi in the year 2015 and onwards for students of class 11 A new feature Typical Illustrative Examples and Typical Problems has been added in some chapters for those students who want to attempt some more challenging problems The entire matter in the book is given in a logical sequence so as to develop and strengthen the concepts of the students **Non-integrable Dynamics: Time-quantitative Results** Jozsef Beck, William Chen, Yuxuan

Yang, 2023-08-24 The subject of this monograph is to describe orbits of slowly chaotic motion The study of geodesic flow on the unit torus is motivated by the irrational rotation sequence where the most outstanding result is the Kronecker Weyl equidistribution theorem and its time quantitative enhancements including superuniformity Another important result is the Khinchin density theorem on superdensity a best possible form of time quantitative density The purpose of this monograph is

to extend these classical time quantitative results to some non integrable flat dynamical systems The theory of dynamical systems is on the most part about the qualitative behavior of typical orbits and not about individual orbits Thus our study deviates from and indeed is in complete contrast to what is considered the mainstream research in dynamical systems We establish non trivial results concerning explicit individual orbits and describe their long term behavior in a precise time quantitative way Our non ergodic approach gives rise to a few new methods These are based on a combination of ideas in combinatorics number theory geometry and linear algebra Approximately half of this monograph is devoted to a time quantitative study of two concrete simple non integrable flat dynamical systems The first concerns billiard in the L shape region which is equivalent to geodesic flow on the L surface The second concerns geodesic flow on the surface of the unit cube In each we give a complete description of time quantitative equidistribution for every geodesic with a quadratic irrational slope      *English Mechanic and Mirror of Science* ,1870
