Reck, Georg Schiemer, 2020 This edited volume explores the previously underacknowledged pre history of mathematical structuralism showing that structuralism has deep roots in the history of modern mathematics The contributors explore this history along two distinct but interconnected dimensions First they reconsider the methodological contributions of major figures in the history of mathematics Second they re examine a range of philosophical reflections from mathematically inclined philosophers like Russell Carnap and Quine whose work led to profound conclusions about logical epistemological and metaphysical aspects of structuralism *The Geometric Supposer* Judah L. Schwartz, Michal Yerushalmy, Beth Wilson, 2013-06-17 This volume is a case study of education reform and innovation using technology that examines the issue from a wide variety of perspectives It brings together the views and experiences of software designers curriculum writers teachers and students researchers and administrators Thus it stands in contrast to other analyses of innovation that tend to look through the particular prisms of research classroom practice or software design The Geometric Supposer encourages a belief in a better tomorrow for schools On its surface the Geometric Supposer provides the means for radically altering the way in which geometry is taught and the quality of learning that can be achieved At a deeper level however it suggests a powerful metaphor for improving education that can be played out in many different instructional contexts
