Fontanarosa, Annette Flanagan, Philip Greenland, 2024 Publication of biomedical research is essential for improvement and advancement of medical science and clinical practice The history of scientific

publication including journals devoted to medical science dates to the 1600s The number of peer reviewed scientific journals is estimated to be in the tens of thousands and the number of journals especially with the increasing creation of open access publications continues to expand Yet despite the long history of and ubiquitous nature of scientific publications the core principles involved in biomedical publication as well as the specific skills of writing and manuscript preparation are not commonly taught in a formal or comprehensive way in medicine public health or research curricula

Measuring Academic Research Ana Andres,2009-11-11 Measuring Academic Research outlines how to undertake a bibliometric study a topic of vital importance in academic research today Scientometrics studies assess scientific productivity and can be applied to all disciplines Many analyses have been applied in relation to bibliometric studies but few have shown how to actually carry out the analysis This book provides a guide on how to develop a bibliometric study from the first step in which the topic study has to be set to the analysis and interpretation A practical and easy to read guide on how to carry out a bibliometric study Gives a wide and up to date view about the most common scientometric indexes Analyses are illustrated with multiple and practical examples about their application

Predicting the Dynamics of Research Impact Yannis Manolopoulos,Thanasios Vergoulis,2021-09-22 This book provides its readers with an introduction to interesting prediction and science dynamics problems in the field of Science of Science Prediction focuses on the forecasting of future performance or impact of an entity either a research article or a scientist and also the prediction of future links in collaboration networks or identifying missing links in citation networks The single chapters are written in a way that help the reader gain a detailed technical understanding of the corresponding subjects the strength and weaknesses of the state of the art approaches for each described problem and the currently open challenges While chapter 1 provides a useful contribution in the theoretical foundations of the fields of scientometrics and science of science chapters 2 4 turn the focal point to the study of factors that affect research impact and its dynamics Chapters 5 7 then focus on article level measures that quantify the current and future impact of scientific articles Next chapters 8 10 investigate subjects relevant to predicting the future impact of individual researchers Finally chapters 11 13 focus on science evolution and dynamics leveraging heterogeneous and interconnected data where the analysis of research topic trends and their evolution has always played a key role in impact prediction approaches and quantitative analyses in the field of bibliometrics Each chapter can be read independently since it includes a detailed description of the problem being investigated along with a thorough discussion and study of the respective state of the art Due to the cross disciplinary character of the Science of Science field the book may be useful to interested readers from a variety of disciplines like information science information retrieval network science informetrics scientometrics and machine learning to name a few The profiles of the readers may also be diverse ranging from researchers and professors in the respective fields to students and developers being curious about the covered subjects

Springer Handbook of Science and Technology Indicators Wolfgang Glänzel,Henk F. Moed,Ulrich Schmoch,Mike Thelwall,2019-10-30

This handbook presents the state of the art of quantitative methods and models to understand and assess the science and technology system. Focusing on various aspects of the development and application of indicators derived from data on scholarly publications, patents and electronic communications, the individual chapters written by leading experts discuss theoretical and methodological issues, illustrate applications, highlight their policy context and relevance, and point to future research directions. A substantial portion of the book is dedicated to detailed descriptions and analyses of data sources, presenting both traditional and advanced approaches. It addresses the main bibliographic metrics and indexes such as the journal impact factor and the h index, as well as altmetric and webometric indicators and science mapping techniques on different levels of aggregation and in the context of their value for the assessment of research performance, as well as their impact on research policy and society. It also presents and critically discusses various national research evaluation systems. Complementing the sections reflecting on the science system, the technology section includes multiple chapters that explain different aspects of patent statistics, patent classification and database search methods to retrieve patent related information. In addition, it examines the relevance of trademarks and standards as additional technological indicators. The Springer Handbook of Science and Technology Indicators is an invaluable resource for practitioners, scientists and policy makers wanting a systematic and thorough analysis of the potential and limitations of the various approaches to assess research and research performance.

The Future of the Academic Journal Bill Cope, Angus Phillips, 2009-06-22 Examines current issues in journals publishing and reviews how the industry will develop over the next few years. With contributions from leading academics and industry professionals, the book provides an authoritative and balanced view of this fast changing area. There are a variety of views surrounding the future of journals and these are covered using a range of contributors. Online access is now taken for granted: 90 per cent of journals published are now available online, an increase from 75 per cent in 2003. Looks at a fast moving and vital area for academics and publishers. Contains contributions from leading international figures from universities and publishers.

Bibliometrics and Research Evaluation Yves Gingras, 2016-10-07 Why bibliometrics is useful for understanding the global dynamics of science but generate perverse effects when applied inappropriately in research evaluation and university rankings. The research evaluation market is booming. Ranking metrics, h index and impact factors are reigning buzzwords. Government and research administrators want to evaluate everything: teachers, professors, training programs, universities using quantitative indicators. Among the tools used to measure research excellence, bibliometrics, aggregate data on publications and citations, has become dominant. Bibliometrics is hailed as an objective measure of research quality, a quantitative measure more useful than subjective and intuitive evaluation methods such as peer review that have been used since scientific papers were first published in the seventeenth century. In this book, Yves Gingras offers a spirited argument against an unquestioning reliance on bibliometrics as an indicator of research quality. Gingras shows that bibliometric rankings have no real scientific validity, rarely measuring what they pretend to. Although the study of publication

and citation patterns at the proper scales can yield insights on the global dynamics of science over time ill defined quantitative indicators often generate perverse and unintended effects on the direction of research Moreover abuse of bibliometrics occurs when data is manipulated to boost rankings Gingras looks at the politics of evaluation and argues that using numbers can be a way to control scientists and diminish their autonomy in the evaluation process Proposing precise criteria for establishing the validity of indicators at a given scale of analysis Gingras questions why universities are so eager to let invalid indicators influence their research strategy Multidimensional Journal Evaluation Stefanie

Haustein,2012-04-26 Scientific communication depends primarily on publishing in journals The most important indicator to determine the influence of a journal is the Impact Factor Since this factor only measures the average number of citations per article in a certain time window it can be argued that it does not reflect the actual value of a periodical This book defines five dimensions which build a framework for a multidimensional method of journal evaluation The author is winner of the Eugene Garfield Doctoral Dissertation Scholarship 2011 **Seeking Thyroid Truths** Petros Perros,2024-08-29 This book is for patients with thyroid diseases and anyone interested in the thyroid including carers of thyroid patients members of the lay public and healthcare workers who deal with thyroid patients The intention is to provide the means by which good quality information about the thyroid gland and its diseases can be found accessed weighed and judged for scientific merit The book can be read like a story but can also serve readers as a reference manual when looking for information on a thyroid related topic Thyroid diseases affect 10% of the population People with thyroid problems their family carers and health professionals often seek information The available sources are disappointing and misleading There is an unmet need and a desire by patients the lay public students and early career healthcare workers to learn how to access and appraise the evidence which is rarely fulfilled by existing resources The book consists of two parts Part One contains six chapters The first Chapter Obstacles to seeking the truth discusses the common hurdles that can come between us and the knowledge we seek Chapter Two Thyroid basics is an overview of the structure and function of the thyroid gland and the common diseases that affect it narrated through the convoluted history of discoveries relating to the thyroid In Chapter Three What is the evidence evidence based medicine is discussed how different medical publications are classified the processes involved in publishing medical papers and how they are structured This is relevant and important in understanding the selection process in play that a piece of academic work is subjected to before it reaches its readers how it varies and how it may correlate with the quality of the end product Chapter Four Mining the truth is about conducting searches It identifies appropriate search engines and gives tips on how to stay on course Chapter Five Appraising the evidence outlines how to judge the quality of published papers based on checklists Chapter Six Interpreting the evidence will help extract the meaning of a piece of research Part Two What is the optimal range is an example of a common question asked by patients with hypothyroidism the commonest thyroid condition It will reveal a truth that should be making headlines and attracting the attention of patient advocates thyroid

specialists their professional organisations and the public at large Yet all relevant parties seem to choose to ignore it and channel their energies in other directions It is an example of good science yielding valuable knowledge which is undermined and made worthless by poor implementation Herein lies the most important message of this book seeking truth and getting close to it is not enough how it is used to change the lives of patients is what really matters Relevant references are included at the end of each chapter to indicate the sources in case the reader wishes to access them **Public Health Reports**

,2002 **Numerical Correlation between Impact Factor and Web Ranking of Electronic Scientific Journals Using Regression Analysis** Giorgos Kouropoulos,Γιώργος Κουρόπουλος,2017-12-15 The present study attempts to examine the numerical correlation between web ranking of electronic scientific journals and impact factor of these journals using the method of regression analysis Regression analysis allows the option of investigating and predicting the numerical relationship between website ranking of scientific journals on the World Wide Web and the value of impact factor of the journals A sample of 57 publishers with 6 272 scientific journals and 50 standalone scientific journals was analyzed during research procedure In this study two different indicators about websites classification on World Wide Web were examined separately for 57 publishers and 50 standalone journals Alexa rank and Statscrop rank The electronic databases through the internet constitute the main information resources of this study about the impact factors The general conclusion that arises is that the impact factor of electronic scientific journals illustrates a very strong positive correlation with classification of websites on the World Wide Web Furthermore it is concluded that the change of web ranking as a function of impact factor is governed by a Gaussian function or rational function with lower Pearson coefficient and presents non linearly correlation Even if there is very strong correlation between impact factor and web rank for electronic journals the prediction of impact factor from web rank is not possible and presents many divergences **Classic Papers in Orthopaedics** Paul A.

The Subjectivities and Objectivities of Peer Review Daniel Ucko, 2024-12-16 What do we want Evidence based science When do we want it After peer review We have come to think of peer review as the stamp of quality that separates real results from mere conjecture but a look under the hood reveals that the participants inside of peer review are far from objective This book reclaims subjectivity and affirms a social mode of objectivity which prevents peer review from overpromising and underdelivering in its vital role in knowledge production
