**Catalog of Copyright Entries. Third Series** Library of Congress. Copyright Office, 1977      **Evidence, Explanation, and Realism** Peter Achinstein, 2010-05-28 The essays in this volume address three fundamental questions in the philosophy of science What is required for some fact to be evidence for a scientific hypothesis What does it mean to say that a scientist or a theory explains a phenomenon Should scientific theories that postulate unobservable entities such as electrons be construed realistically as aiming to correctly describe a world underlying what is directly observable or should such theories be understood as aiming to correctly describe only the observable world Distinguished philosopher of science Peter Achinstein provides answers to each of these questions in essays written over a period of more than 40 years The present volume brings together his important previously published essays allowing the reader to confront some of the most basic and challenging issues in the philosophy of science and to consider Achinstein's many influential contributions to the solution of these issues He presents a theory of evidence that relates this concept to probability and explanation a theory of explanation that relates this concept to an explaining act as well as to the different ways in which explanations are to be evaluated and an empirical defense of scientific realism that invokes both the concept of evidence and that of explanation

[Testing Regimes, Accountabilities and Education Policy](#) Bob Lingard, Goli Rezai-Rashti, Wayne Martino, 2017-10-02 Around the globe various kinds of testing including high stakes national census testing have become meta policies steering educational systems in particular directions and having great effects on schools and on teacher practices as well as upon student learning and curricula There has also been a complementary global aspect to this with the OECD's PISA and IEA's TIMSS and PIRLS which have had impacts on national education systems and their policy frameworks While there has been a globalized educational policy discourse that suggests that high stakes standardised testing will drive up standards and enhance the quality of a nation's human capital and thus their international economic competitiveness this discourse still manifests itself in specific vernacular path dependent ways in different nations High stakes testing and its effects can also be seen as part of

the phenomenon of the datafication of the world and policy as numbers linked to other reforms of the state including new public management network governance and top down and test based modes of accountability This edited collection provides theoretically and empirically informed analyses of these developments This book was originally published as a special issue of the Journal of Education Policy

,1997      The Future of Creation Order Gerrit Glas,Jeroen de Ridder,2018-01-12 This work provides an overview of attempts to assess the current condition of the concept of creation order within reformational philosophy compared to other perspectives Focusing on the natural and life sciences and theology this first volume of two examines the arguments for and against the beauty coherence and order shown in the natural world being related to the will or nature of a Creator It examines the decay of a Deist universe and the idea of the pre givenness of norms laws and structures as challenged by evolutionary theory and social philosophy It describes the different responses to the collapse of order that given by Christian philosophy scholars who still argue for the idea of a pre given world order and that of other scholars who see this idea of stable creation order and or natural law as redundant and in need of a thorough rethinking It studies the particular role that reformational philosophy has played in the discussion It shows how ever since its inception almost a century ago the concepts of order and law principle structure have been at the heart of this philosophy and that one way to characterise this tradition is as a philosophy of creation order Reformational philosophers have maintained the notion of law as holding for reality This book discusses the questions that have arisen about the nature of such law is it a religious or philosophical concept does law just mean orderliness How does it relate to laws of nature Have they always existed or do they emerge during the process of evolution
