Orhan Pamuk and the Good of World Literature Gloria Fisk, 2018-02-13 When Orhan Pamuk won the Nobel Prize for Literature in 2006 he was honored as a builder of bridges across a dangerous chasm By rendering his Turkish characters and settings familiar where they would otherwise seem troublingly foreign and by speaking freely against his authoritarian state he demonstrated a variety of literary greatness that testified also to the good literature can do in the world Gloria Fisk challenges this standard for canonization as world literature by showing how poorly it applies to Pamuk Reading the Turkish novelist as a case study in the ways Western readers expand their reach Fisk traces the terms of his engagement with a literary market dominated by the tastes of its Anglophone publics who received him as a balm for their anxieties about Islamic terrorism and the stratifications of global capitalism Fisk reads Pamuk's post 9 11 novels as they circulated through this audience as rich in cultural capital as it is far flung in the American English that is global capital's lingua franca She launches a polemic against Anglophone readers instrumental use of literature as a source of crosscultural understanding contending that this pervasive way of reading across all manner of borders limits the globality it announces because it serves the interests of the Western cultural and educational institutions that produce it Orhan Pamuk and the Good of World Literature proposes a new way to think about the uneven processes of translation circulation and judgment that carry contemporary literature to its readers wherever they live

Whales and Elephants in International Conservation Law and Politics Ed Couzens,2013-11-07 Whales and elephants are iconic giants of the marine and terrestrial animal world Both are conspicuous representatives of wildlife conservation The issues of whaling and the ivory trade are closely linked both legally and politically in many ways some obvious and some surprising The treatment of both whales and elephants will be politically and legally contentious for years to come and is of great significance to conservation in general This book examines the current state of international environmental law and wildlife conservation through a comparative analysis of the treatment of whales and elephants In particular it describes the separate histories of international governance of both whales and elephants presenting the various treaties through which conservation has been implemented It is shown that international environmental law is influenced and shaped by important political actors many with opposing views on how best conservation and sustainable development principles are to be implemented Modern environmental treaties are changing as weaknesses and loopholes are exposed in older and possibly outdated treaties such as the Convention on International Trade in Endangered Species of Wild Fauna and Flora CITES and the International Convention for the Regulation of Whaling ICRW Such weaknesses can be seen in the efforts made by some states to circumvent or weaken CITES and the International Whaling Commission and to resume commercial whaling and further in the efforts of countries to resume trade in ivory The argument is made that the Convention on Biological Diversity could be used to begin reconciling opposed views and to focus conservation efforts The argument is made that effective conservation of species cannot be achieved through individual treaties but only through a synergistic approach involving multilateral environmental agreements ecosystems of legal instruments
