8 Unscrew the pivot bolt securing the gearchange lever to the footrest bracket and remove the lever and linkage assembly (see illustration).

9 If required, slacken the linkage rod locknuts and thread the lever off the rod. Note the how far the rod is threaded into the lever as this determines the height of the lever relative to the footrest.

Installation

10 Installation is the reverse of removal. Align the marks made on the gearchange lever linkage arm and shaft when installing the arm onto the shaft, and tighten the pinch bolt securely (see illustration). Adjust the gear lever height as required by slackening the rod locknuts and screwing the rod in or out of the lever and linkage arm (see illustration). Tighten the locknuts securely on completion.

sidestand and unhook the centre stand spring, then unscrew the nuts, withdraw the bolts and remove the stand (see illustration).

2 Inspect the stand and pivot bolts for signs of wear and replace them if necessary. Apply a smear of grease to the bolts and fit the stand back on the bike, tightening the bolts securely. Reconnect the return spring.

3 Make sure the spring is in good condition and capable of holding the stand up when not in use. A broken or weak spring is an obvious safety hazard.

Sidestand

4 The sidestand is attached to a bracket on the frame. A spring anchored to the bracket ensures that the stand is held in the retracted or extended position.

5 Support the bike on its centre stand if fitted, or support it using an auxiliary stand.

6 Unhook the stand spring and unscrew the nut from the pivot bolt (see illustration). Withdraw the pivot bolt to free the stand from its bracket.

7 On installation apply grease to the pivot bolt shank and tighten the bolt securely. Reconnect the sidestand spring and check that the return spring holds the stand securely up when not in use - an accident is almost

Removal

Note: If required, the handlebars can be displaced for access to the fork top bolts or the steering stem nut without removing the switch housings and the front brake master cylinder assembly and the clutch lever assembly.

1 Remove the screws securing both the left- and right-hand switch housings to the handlebar, noting how the top mating surfaces of the switch housings align with the top mating surfaces of the brake master cylinder and clutch lever assembly clamps, then separate the switch halves. Detach the throttle cables from the throttle pulley and note how the choke lever fits (see Chapter 3 if required), then remove the housings from the
