

Random mutations occur in populations all of the time. Mutations that produce variations (ie white fur instead of brown) sometimes help an organism ADAPT to its environment BETTER. Organisms that are better adapted are more likely to live and produce offspring. Eventually, this trait can take over a population.

- How does studying embryos give us clues to which organisms are most closely related? Give an example.

Embryos that have the most similarities throughout gestation are most likely more closely related. For example, the rabbit and the human are almost identical up until the third trimester.

- What is the difference between artificial and natural selection. Give examples of each.

Artificial is driven by humans while natural selection is driven by nature. Dogs are an example of artificial selection while wolves are an example of natural selection.

- Describe the bunny lab. What made the bunny population grow? Disappear? Change?

In the bunny lab, you could add mutations that enabled the bunnies to better adapt to their environments (ie food sources, habitat, predators). A favorable trait quickly replaced the less favorable one.

- Below is a phylogeny (tree of common ancestors):

- How are common ancestors indicated? **Intersecting lines.**
- Which organisms are most closely related? **Bear/Chimp**
- Which organisms are least related? **Lamprey/Chimp**
- Which organism is most closely related to a Lamprey? **Sunfish**

- What is the definition of a species?

A population of animals that can interbreed and produce fertile offspring.

- Are ligers, zorses, and mules considered their species? Why or why not?

No. They can mate but their offspring are sterile. You cannot breed two ligers and make more ligers.

- Define "niche" and "competition". Give examples of each.

A "niche" is the role or function of an organism in its environment. "Competition" is a negative interaction between organisms where they are competing for the same limited resource (ie food or shelter). Examples: a predator's "niche" is often to control prey populations. "Competition" occurs between tigers who occupy and hunt in overlapping territories.

- What is a vestigial trait? Give an example.

A trait that is no longer needed/used but was inherited from a common ancestor. Examples: wisdom teeth, appendix, facial hair, ear muscles, etc.

- What is the difference between analogous and homologous traits? Check all that are true.

Lesson 13 Natural Selection Answers:

Lawrence Wood, 2009-09-01 Numerous opinion polls reported from time to time in the daily newspaper reveal that approximately 40% of Americans believe in Creationism 40% in Intelligent Design and 20% in Evolution Have you ever wondered why there are three such drastically different explanations of our origin Evolution The Inevitable Consequence of the Need for Species Survival explains why there are three and how and why three were developed Perhaps you are a Creationist you will meet Stephen Geoffrey who was once a Creationist He describes his agonizing reappraisal of his beliefs and eventual abandonment of Creationism Take a look it might change your views The Bible states in Genesis Chapter 7 verse 19 regarding the biblical Flood that the waters prevailed so mightily upon the earth that all the high mountains under the whole heaven were covered That s a lot of water did it really happen Chapter 9 answers this question by examining the biblical Flood in detail such as the 820 million cubic miles of water required to cover the highest mountains for which there is no credible source If you do not believe in Evolution the powerful and detailed facts in Evolution might cause you to pause and reconsider even if only for a moment

Boundaries of Evolution Theodore R. Johnstone, M.D., 2014-08-30 Boundaries of Evolution describes the unlikelihood of evolutionary theory to explain how it is supposed to scale three major biological cliffs The first cliff is the need for a logical explanation of how random chemical reactions could produce the first living cell from the primordial soup The second is the problem of explaining how the first single celled eukaryote evolved from a prokaryote Mathematical improbabilities of evolutionary theory to scale the first two cliffs in the time available are demonstrated The third insurmountable cliff is the necessity for a reasonable explanation of how millions of different kinds of multi celled eukaryotes could have quickly evolved from single celled eukaryotes Random mutations occurring in DNA accepted or rejected by natural selection are hailed as the source of advancement for the increase in biotic complexity The most common time for mutations to occur in the DNA is during replication Therefore evolutionary advancement should occur faster in biota with the most frequent replication cycles If both evolutionary theory and the fossil record are correct prokaryotes which replicate in as little as 20 minutes took 2 billion years to evolve the first single celled eukaryote Single celled eukaryotes generally having shorter reproductive times than multi celled eukaryotes took another billion years to evolve the first multi celled eukaryote Then during Cambrian times the multi celled eukaryotes with the longest reproductive cycles literally exploded in diversity in a comparatively short time How could this be Other inadequacies of Darwin s theory are presented for everyone to see

Is the Bible Divinely Inspired (Special Edition) Richie Cooley, 2019-01-11 This book seeks to prove the Bible through science studies on Messianic prophecies and by examining divine patterns in the Word and in nature It has been newly revised in 2019

Modern Physics and Ancient Faith Stephen M. Barr, 2003-02-28 A considerable amount of public debate and media print has been devoted to the war between science and religion In his accessible and eminently readable new book Stephen M Barr demonstrates that what is really at war with religion is not

science itself but a philosophy called scientific materialism Modern Physics and Ancient Faith argues that the great discoveries of modern physics are more compatible with the central teachings of Christianity and Judaism about God the cosmos and the human soul than with the atheistic viewpoint of scientific materialism Scientific materialism grew out of scientific discoveries made from the time of Copernicus up to the beginning of the twentieth century These discoveries led many thoughtful people to the conclusion that the universe has no cause or purpose that the human race is an accidental by product of blind material forces and that the ultimate reality is matter itself Barr contends that the revolutionary discoveries of the twentieth century run counter to this line of thought He uses five of these discoveries the Big Bang theory unified field theories anthropic coincidences Godel's Theorem in mathematics and quantum theory to cast serious doubt on the materialist's view of the world and to give greater credence to Judeo Christian claims about God and the universe Written in clear language Barr's rigorous and fair text explains modern physics to general readers without oversimplification Using the insights of modern physics he reveals that modern scientific discoveries and religious faith are deeply consonant Anyone with an interest in science and religion will find Modern Physics and Ancient Faith invaluable

Adaptive Origins Peter LaFrenière, 2011-01-07 In this text students are invited to rethink psychology by grounding it in the natural sciences with the understanding that evolutionary and developmental processes work together with culture to solve problems of human adaptation These processes are cast as interdependent Development cannot be understood except in the light of evolutionary theory and the best proof of evolution is the fact of development For students of evolutionary psychology all the central topics such as evolved mental modules for theory of mind or language require an understanding of the developmental processes that lead to their expression Genes as important as they are are never the whole story The role of biological factors is explored in chapters outlining evolution development genetics human origins hormones and the brain Then the integrative value of this evolutionary developmental vision in understanding key topics in psychology is illustrated by applying it to traditional area of inquiry including infancy and attachment emotions and their expression social relations with peers cognitive and language development sex differences courtship and mating violence and aggression and cooperation and competition

Theory of Population Genetics and Evolutionary Ecology Joan Roughgarden, 1979 This is a reprint of a classic which synthesizes population genetics and population genetics to form one of the first books on evolutionary ecology Written by one of the foremost authorities in the field it is designed as an introduction useful to readers at various levels from diverse backgrounds It features balanced readable coverage of both elementary and advanced topics that are essential to those interested in evolutionary biology ecology animal behavior sociobiology and paleobiology

Natural Selection and Beyond Charles Hyde Smith, George Beccaloni, 2010 Alfred Russel Wallace 1823-1913 was one of the late nineteenth century's most potent intellectual forces His

link to Darwin as co discoverer of the principle of natural selection alone would have secured him a place in history but he went on to complete work entitling him to recognition as the father of modern biogeographical studies as a pioneer in the field of astrobiology and as an important contributor to subjects as far ranging as glaciology land reform anthropology and ethnography and epidemiology Beyond this many are coming to regard Wallace as the pre eminent field biologist collector and naturalist of tropical regions Add to that the fact that he was a vocal supporter of spiritualism socialism and the rights of the ordinary person and it quickly becomes apparent that Wallace was a man of extraordinary breadth of attention Yet his work in many of these areas is still not well known and still less recognized is his relevance to current day research almost 100 years after his death This rich collection of writings by more than twenty historians and scientists reviews and reflects on the work that made Wallace a famous man in his own time and a figure of extraordinary influence and continuing interest today

The Foundations of Human Experience Rudolf Steiner,1996 Opening address Stuttgart August 20 1919 14 lectures Stuttgart August 21 September 5 1919 CW 293 2 lectures Berlin March 15 and 17 1917 CW 66 Although we can physically see children only after their birth we need to be aware that birth is also a continuation We do not want to look only at what the human being experiences after death that is at the spiritual continuation of the physical We want to be aware that physical existence is a continuation of what higher beings have done without our assistance Our form of educating can have the correct attitude only when we are aware that our work with young people is a continuation of what higher beings have done before birth Rudolf Steiner This course on education contains some of the most remarkable and significant lectures ever given by Rudolf Steiner Because these lectures were given to teachers however they have suffered the misconception that they are useful only to teachers Any teacher who wants to teach in a way that encompasses the whole child certainly needs a functional understanding of what Steiner presents here but these lectures will also greatly benefit parents psychologists counselors or anyone else involved with child development Steiner gives his most concise and detailed account of human nature in these lectures which are absolutely essential for anyone who wants a deeper understanding of Steiner s spiritual science Those who are willing to work through this work will discover here a new powerful convincing and profoundly phenomenological anthropology of human spiritual psychology In these lectures Steiner laid out for the first time the principles that form the basis for renewing the art of teaching *The Foundations of Human Experience* is the most important text for studying and understanding the human developmental and psychological basis for Waldorf education
