

Mathematics Short Term Lesson Plan

Date	Year/Class
Relevant Q2T Standards <i>Find at least one relevant standard that relates to your lesson and make it a different one to the focus in your last lesson. Early in your practice you might consider the standard retrospectively while later on you may plan with it in mind.</i>	
Context of Lesson <i>Your description should explain how this lesson fits in with the sequence of lessons that it relates to. In particular you should indicate any issues arising from the previous lesson. For example: "A number of children seem to have developed a misconception about..... and this lesson will attempt to address this by....." Would be a much more useful comment than: "This is the fourth lesson of five on fractions" This box is best completed in the period between the previous maths lesson and this one.</i>	
Learning Objectives Mental/Oral <i>These should not necessarily be lifted straight from the NNS Framework Programmes of study but be adapted as appropriate to meet the specific needs of the children you are teaching.</i>	Learning Objectives Main <i>As well as the advice opposite it is worth remembering that children frequently don't achieve objectives in a single lesson and should not be expected to. It may be possible to break objectives down into smaller steps that can be achieved but be wary of losing the 'bigger picture' if you do this. Consider any links to other objectives that are not your main focus in order to be aware of opportunities for developing 'relational understanding'.</i>
Key Vocabulary <i>You may find the NNS Vocabulary Book very useful for identifying appropriate vocabulary. Restrict this to key vocabulary that will actually be used. Identify any terms that are 'new'.</i>	Resources <i>It would be useful to list these resources to act as a checklist for your lesson preparations. You need to think about the particular relevance of the resources in supporting the lesson objectives.</i>
Mental/Oral (time) <i>It is good practice for this part of the lesson to relate to the main part of the lesson eg. processing skills that will be used in that section of the lesson. If you choose not to do this you should indicate the reason for your decision.</i>	Key Questions <i>These should be questions that you are going to use in the lesson. You might find it useful to use this box as a script for the questions you ask in the lesson. The NNS Vocabulary Book (pages 4-6) may be helpful in helping to formulate questions.</i>
Main Activities (time) <i>This is the most important box on the plan and should be completed in detail. You should identify an introduction and the (differentiated) activities that will take place. The number of different activities that you choose to use should be a realistic number to manage. Identify the focus group(s) that you will be working with and the role of any other adults. Make a clear distinction between what you will be modelling, demonstrating etc.... and what the pupils will be doing. For any task that you prepare think very carefully about what the pupils will learn from it. It will be useful to indicate a time-frame for each of the activities taking place.</i>	Key Questions <i>Do remember the use of probing questions. Think about the responses your questions might elicit from children, in particular 'incorrect' ones and how you might follow them up. Where you can try to avoid leaving yourself in a position where you have to think on your feet. Looking at the 'errors and misconceptions' section of your medium-term plan may be helpful in helping you to devise questions.</i>
Plenary (time) <i>This is a very important part of the lesson and needs to be planned thoroughly. Will it be used to summarise, to extend the main part of the lesson, to introduce tomorrow's session or to address misconceptions? An indication of</i>

Schools have been using various approaches to address the struggles that students are having with mathematics learning that have been compounded by the pandemic There is an overwhelming consensus by both educators and researchers that we need to adapt acceleration rather than remediation as a tool to counteract the challenges that students currently face Acceleration is about equity which allows all our students to access an engaging standards based academically rigorous grade level curriculum In this book educational consultant Dr Nicki Newton shows K 8 teachers how to accelerate mathematics instruction so that all students learn and work on grade level receive the right scaffolding when they need it and feel a sense of achievement and success Educators will in turn experience lower frustration and the joy of helping students thrive Taking a deep dive into in school acceleration chapters address research planning assessment pedagogy teaching math vocabulary lesson planning goal setting and motivation and action planning Readers will learn how to use acceleration to get everybody motivated to learn and to create pathways of achievement Book Features Unpacks accelerating instruction as a way of saying everybody is invited to this party Looks at how acceleration provides a pathway to helping academically challenged students achieve and move in step with their grade level standards Offers detailed ways to plan implement and evaluate accelerated math lessons in grades K 8 Provides numerous tools templates and strategies so readers can use ideas right away *Productive Math Struggle* John J. SanGiovanni,Susie Katt,Kevin J. Dykema,2020-03-09

Seldom has a book been as timely or as necessary as *Productive Math Struggle* is today One of the remarkable accomplishments of SanGiovanni Katt and Dykema s work lies in how they seamlessly connect the research on high quality tasks high expectations identity and equity to productive math struggle This is perhaps their greatest contribution The authors see productive math struggle as a critical feature of mathematics classrooms that support access equity and empowerment specifically arguing that every student is worthy of struggle From the Foreword by Matt Larson Ph D Past President 2016 2018 National Council of Teachers of Mathematics Associate Superintendent for Instruction Lincoln Public Schools Nebraska

Struggle is hard Productive struggle is power All students face struggle and they should it is how they learn and grow The teacher s job is not to remove struggle but rather to value and harness it helping students develop good habits of productive struggle But what s missing for many educators is an action plan for how to achieve this especially when it comes to math Persevering through difficult challenges to reach new learning is the core of *Productive Math Struggle* When left unsupported struggle can become unproductive and demoralizing negatively influencing students mathematical identities The authors guide teachers through six specific actions including valuing fostering building planning supporting and reflecting on struggle to create a game plan for overcoming obstacles by sharing Actionable steps activities and tools for

implementation Instructional tasks and vignettes representative of each grade level Real world examples showcasing classroom photos and student work samples A book study guide is available under the Free Resources tab that helps math educators to learn together on how to incorporate productive math struggle in their classrooms Revolving around the idea that math is a way of thinking and understanding and not just the pursuit of answers and procedures this book empowers students to embrace productive struggle to build essential skills for learning and living both inside and outside the classroom
