The Dragon in the Cockpit Hung Sying Jing, Allen Batteau, 2016-03-23 The purpose of The Dragon in the Cockpit is to enhance the mutual understanding between Western aviation human factors practitioners and the Chinese aviation community by describing some of the

fundamental Chinese cultural characteristics pertinent to the field of flight safety China's demand for air transportation is widely expected to increase further and the Chinese aviation community are now also designing their own commercial aircraft the COMAC C 919 Consequently the interactions in the air between the West and China are anticipated to become far more extensive and dynamic However due to the multi faceted nature of Chinese culture it is sometimes difficult for Westerners to understand Chinese thought and ways sometimes to the detriment of aviation safety This book provides crucial insights into Chinese culture and how it manifests itself during flight operations as well as highlighting ways in which Western technology and Chinese culture clash within the cockpit Science and technology studies STS have demonstrated that sophisticated technologies embed cultural assumptions usually in subtle ways These cultural assumptions bite back when the technology is used in an unfamiliar cultural context By creating the insider's perspective on the cultural technological assumptions of the world's fastest growing industrial economy this book seeks to minimize the accidents and damage resulting from technological cultural misunderstandings and misperceptions Pan Am Pioneer Sanford B. Energy: a Continuing Bibliography with Indexes ,1983 **Energy** ,1983 **Safety at the Sharp End** Rhona Flin,Paul O'Connor,2017-05-15 Many 21st century operations are characterised by teams of workers dealing with significant risks and complex technology in competitive commercially driven environments Informed managers in such sectors have realised the necessity of understanding the human dimension to their operations if they hope to improve production and safety performance While organisational safety culture is a key determinant of workplace safety it is also essential to focus on the non technical skills of the system operators based at the sharp end of the organisation These skills are the cognitive and social skills required for efficient and safe operations often termed Crew Resource Management CRM skills In industries

such as civil aviation it has long been appreciated that the majority of accidents could have been prevented if better non technical skills had been demonstrated by personnel operating and maintaining the system As a result the aviation industry has pioneered the development of CRM training Many other organisations are now introducing non technical skills training most notably within the healthcare sector Safety at the Sharp End is a general guide to the theory and practice of non technical skills for safety It covers the identification training and evaluation of non technical skills and has been written for use by individuals who are studying or training these skills on CRM and other safety or human factors courses The material is also suitable for undergraduate and post experience students studying human factors or industrial safety programmes
