Adding Enterprise Value Oliver Schneider,2010 Value creation is no longer achieved through a single company alone or through a network of local suppliers but rather through wide ranging even global supply chains This reduces the transparency of the benefits and risks of the various supply chain setups and activities used for improving the performance of the supply chain Such supply chain initiatives usually result in an investment by all supply chain partners involved including the respective Chief Financial Officer CFO The supply chain partners therefore need a tool to show what improvements they can provide in logistics generally the reduction of inventory and reduction of lead time in terms of those financial variables that describe the value added to the company The connection

between supply chain management and financial management is currently very important. The integration of the two management levels is extremely important for the success of a supply chain initiative. Showing the possible benefits and risks for all concerned is a pre-requisite for assessing the economic value of the initiative and perceiving the win-win situation. This book and the Supply Chain Value Contribution (SCVC) method described therein provide an approach to showing the cause and effect of supply chain initiatives on supply chain performance and working capital utilization on the basis of the well-established Supply Chain Operations Reference (SCOR) model. A clear and traceable approach on how to measure and sell the value created by the resulting operational supply chain performance improvements. The application of the SCVC method is described in two use cases. Due to the comprehensive but pragmatic presentation of the content, this book will be of value to both practitioners and academics alike.
