Accounting for Sustainability: Asia Pacific Perspectives Ki-Hoon Lee, Stefan Schaltegger, 2018-01-30 This book advances the understanding of corporate sustainability and challenges and roles of sustainability accounting in the Asia Pacific region. The Asia Pacific region has shown fast economic growth for several decades, which is expected to continue. In this context, Asia has become the production engine of the global economy. At the same time, scientific reports reveal that some planetary boundaries are crossed, for example relating to biodiversity and climate change. Companies in the Asia Pacific

region are therefore increasingly challenged to reduce their environmental impacts to document their social contribution and to contribute to sustainable development. Key approaches to identify sustainability problems and challenges to support improvement processes and to back up sustainability contributions include accounting and reporting. In contrast to the high relevance of accounting and reporting for corporate sustainability for the Asia Pacific region, academic research has so far been dominated by Western researchers and predominantly dealt with Western and Japanese cases and approaches. It is thus time to take account of Asian perspectives on accounting and reporting for sustainability in the Asia Pacific region.

Management Accounting A. Nishimura, 2003-01-10. This book examines present management accounting issues in the light of Japanese experiences. This is particularly important in the study of management accounting since Japanese management not only learnt from the West but also grew out of it. The book describes the importance and meaning of feed forward management accounting, compares Asian and Japanese management accounting with the Western approach and examines the philosophy behind them. It ends by looking into the future of management accounting science. **Managerial Accounting**

Management Accounting Christian Herzig, Tobias Viere, Stefan Schaltegger, Roger L. Burritt, 2012-03-15. Sustainable development will not happen without substantial contributions from and leading roles of companies and business organizations. This requires the provision of adequate information on corporate social and ecological impacts and performance. For the last decade, progress has been made in developing and adapting accounting mechanisms to these needs, but significant work is still needed to tackle the problems associated with conventional accounting. Until recently, research on environmental management accounting (EMA) has concentrated on developed countries and on cost-benefit analysis of implementing individual EMA tools. Using a comparative case study design, this book seeks to redress the balance and improve the understanding of EMA in management decision-making in emerging countries, focussing specifically on South East Asian companies. Drawing on 12 case studies taken from a variety of industries, Environmental Management Accounting: Case Studies of South East Asian Companies explores the relationship between decision situations and the motivation for and barriers to the application of clusters of EMA tools as well as the implementation process itself. This book will be useful to

scholars interested in the environmental and sustainability management accounting research field and those considering specific approaches to EMA within emerging economies
