Singularity is Nearer 2024 by Ray Kurzweil Artificial Intelligence A Modern Approach 1995 by Stuart Russell and Peter Norvig The writers are exceedingly intelligent and the books are useful but not that easy to read University research is equally noteworthy But what about the strategy of adopting AI for the modern operational environment How do you know what to do and how to do it Do you have to be a scientist or a mathematician to do the job Absolutely not Do you need to be a manager a major CEO or even the President of a country Probably yes But you need to have the information to do the job This book gives you what you should do to implement AI in the organization and precisely what you need to know in order to do it When doing the job of implementing should you be knowledgeable about precisely what has to be done Of course Do you personally have to do it Not at all Do you need information on related subjects of course again Do you have to read this book serially Of course not it is too detailed But when you finally get it done properly you do deserve to be a DAI that is a Doctor of Artificial Intelligence That is proposed to be the case in the future Will this be happy reading On some topics yes Other sections not so much There are a lot of pages because the environment of AI is large and complicated Many of the subjects covered in this book will be extremely useful in other areas of business and the organization Artificial Intelligence is an extremely volatile subject It is being adjusted daily and it is almost impossible to figure out what is actually going on The book will be revised and probably copied in content with an air of improvement That is the way the world operates Have a useful and interesting time reading the book It will be worth the effort One more thing The book is for finding out about AI and associated subjects Who knows what the professional and everyday people want to know The book is for everyone Equally important is the fact that the book is specifically designed for an online college course on AI and supports that assertion by including a substantial choice of subjects for the online professor For example the last section on managing uncertainty is very strongly AI based on the Theory of Evidence through the information on Dempster Shafer Theory The author has been involved with AI since a university 3 week seminar in 1963 for a large corporation and taught one of the first graduate level university courses on AI in 1978 He has been the CEO of Artificial Intelligence Consulting AICON a university professor and an international AI consultant after working for Boeing Oak Ridge National Lab and IBM He has written a few books and a few more peer reviewed papers
