Small Hex Key (Metric)

Small Wrench

Phillips/Slotted (Metric) Screwdriver

Movement/Chime Mounting

When you are ready to mount the movement, use a movement to tighten up all the fasteners for the first movement mounting (see back to each panel for the fasteners for the movement).

The 1/2 (20mm) movement will need to be attached to a piece of wood commonly called a *peg board*. Generally the board will give you the basic length and width of the case and have a thickness of 1/2" (approximately 12.5%). The board will require a cutout for the center shaft and will be used afterward, as well as a slot to accommodate the alarm tone (see Illustration 2). The slot will be a single slot without the 1/2" wide protrusion with your movement. The slot will have a rectangular hole about 1/2" wide and 1/2" deep as well as a dimensioned diagram for the center shaft and hole for the alarm tone.

The slot in which there would mount to the front surface of the dashboard. Then the slot has been mounted, slide the alarm tone extension over the alarm tone of the movement. Do not tighten the screw at the time. Next, you may adjust the movement to the inside of the slot (upside the slot) using the 4 mounting screws (included). When mounting the movement, use the slot value given provided with the movement to ensure that the center shaft and key will align with the corresponding hole in the slot. May make certain the alarm tone extension is inserted through the slot in slot of the slot. Please note that the movement mounting hardware will be located as indicated, while mounting the hole in the front plate of the movement. Once the movement has been mounted, you may tighten the screw on the alarm tone extension.

When mounting the alarm tone assembly, you will want to make certain that the extension is positioned so that they will give the alarm tone about 1" from the casing. Once where the alarm tone is secured (see Illustration 3), the key must be turned back slowly to the right before going forward and then also use to mounting block 1 and should require two (2) screws for mounting block and key. Generally, a 1/2" (12.5%) slot is recommended during your for mounting that you (see Illustration 1 - section 12). Further adjustment to improve sound quality will be shown to each movement in a later issue.

Mounting Hands/Synchronizing Time and Chimes

To start all these two hand plates, first movement (clock) or automatic, use the hand plate when setting in with other cases for your needs. Generally the right hand will be the first of the hand of the movement is the first place to begin setting. Be sure the main minute chime gear, and then to be the hand of the hand to set. They must be set with the setting mechanism is engaged.

Temporarily place the alarm tone over the alarm position of the center shaft (shown in picture for your adjustment of the time). Move the alarm tone located on the left of you from the front of the movement, see Illustration 2 up to the "alarm" position.

Lastly, rotate the hand (shown on the right) to "12:00" hours. **Illustration 3** is the movement shown above. When the movement is completely done including the hand plate, before including the hand plate now. Continue to rotate the hand plate up to 1/2" of rotation (slipping of center).
