occurs throughout Australasia the Middle East and South America Few species of mollusks possess the ability to produce pearls of gem quality The South Sea pearl oyster is one of them Pearl production in the wild is an unpredictable and uncontrolled event which human intervention through pearl culture has progressively overcome by improving culture practices Farming mother of pearls shares commonalties with edible mollusk aquaculture However the endproduct pearl production is unique to this sector In aquatic production health issues are of utmost importance pearl production is based entirely upon health The pearl itself is a product of the oyster's immune defenses as a response to soft tissue irritation Exploited stocks receive frequent handling stresses which often predispose farmed animals to infection and diseases Therefore the importance of health management for pearl oysters is paramount Today most disease problems are caused by opportunistic pathogens taking advantage of oysters weakened by the stress of handling including pearl surgery and sub optimal growing conditions Except for the mass mortalities experienced in Japan the pearl oyster industry have not yet faced the types of epizootics which has impacted mollusk culture elsewhere in the world Development of the industry will inevitably lead to increased risk of disease introduction spread or emergence Against such an unwanted future health management is the critical defense line The objectives of this technical paper are to i review pearl oyster mortalities and disease problems in order to help design programs aimed at reducing the risks from diseases and ii provide technical guidance to pearl oyster farmers and the industry on management of pearl oyster health so that sector development will be sustainable not only in providing huge employment to communities where pearl farms are located but also contributing to maintain environmental integrity Pearl oyster farming can serve as environmental sentinels recognizing the fact that pearl oysters thrive only in pristine environment This publication contains three parts Part 1 consists of pearl oyster health the current interest in it and an overview of the cultured marine pearl industry Part 2 on pearl oyster health management consists of seven sections namely a introduction b general information on husbandry and handling hatchery production introductions and transfers c disease diagnostic protocols dealing with field collections of samples gross external examination gross internal examination and laboratory protocols d health zonation e disease outbreak protocols f national strategies on aquatic animal health and g references Certain countries in the pearl oyster producing regions have acquired a great deal of experience in health management of cultured species Experiences from Australia the Cook Islands Japan the French Polynesia the Philippines China the Persian Gulf and the Red Sea are included in Part 3 which also contains a general review of pearl oyster mortalities and disease problems Publisher's description Veterans and Agent Orange Institute of Medicine, Committee to Review the Health Effects in Vietnam Veterans of Exposure to Herbicides (Second Biennial Update), 2000-01-22 Third in a series of six congressionally mandated studies occurring biennially this book is an updated review and evaluation of the available scientific evidence regarding the statistical association between exposure to herbicides used in Vietnam and various adverse health outcomes suspected to be linked with such exposures As part of the review the committee convened a workshop at

which issues surrounding the reanalysis and the combination of existing data on the health effects of herbicide and dioxin exposure were addressed This book builds upon the information developed by the IOM committees responsible for the 1994 original report Veterans and Agent Orange and Veterans and Agent Orange Update 1996 but will focus on scientific studies and other information developed since the release of these reports The two previous volumes have noted that sufficient evidence exists to link soft tissue sarcoma non Hodgkin s lymphoma Hodgkin s disease and chloracne with exposure The books also noted that there is limited or suggestive evidence to show an association with exposure and a neurological disorder in veterans and with the congenital birth defect spina bifida in veterans children This volume will be critically important to both policymakers and physicians in the federal government Vietnam veterans and their families veterans organizations researchers and health professionals *The Passport Issuance Process* United States.
