Performing Math Andrew Fiss, 2020-11-13

Performing Math tells the history of expectations for math communication and the conversations about math hatred and math anxiety that occurred in response. Focusing on nineteenth century American colleges this book analyzes foundational tools and techniques of math communication: the textbooks that supported reading aloud; the burnings that mimicked pedagogical speech; the blackboards that accompanied oral presentations; the plays that proclaimed performers' identities as math students; and the written tests that redefined student performance. Math communication and math anxiety went hand in hand as new rules for oral communication at the blackboard inspired student revolt and as frameworks for testing student performance inspired performance anxiety. With unusual primary sources from over a dozen educational archives, Performing Math argues for a new performance oriented history of American math education, one that can explain contemporary math attitudes and provide a way forward to reframing the problem of math anxiety.

Physics Of Quantum Information, The - Proceedings Of The 28th Solvay Conference On Physics David J Gross, Alexander Sevrin, Peter Zoller, 2023-03-16 Ever since 1911 the Solvay Conferences have shaped modern physics. The format is quite different from other conferences as the emphasis is placed on discussion. The 28th edition held in May 2022 in Brussels and chaired by David Gross and Peter Zoller continued this tradition and addressed some of the most pressing open questions in the fields of quantum information, gathering many of the leading figures working on a wide variety of profound problems. The proceedings contain the rapporteur talks giving a broad overview with unique insights by distinguished renowned scientists. These lectures cover the five sessions: The Physics of Quantum Information, Many Body Entanglement, Quantum Information and Spacetime, Quantum Platforms, Quantum Algorithms. In the Solvay tradition the proceedings also include the prepared comments to the rapporteur talks. The discussions among the participants, expert yet lively and sometimes contentious, have been edited to retain their flavor and are reproduced in full. The reader is taken on a breathtaking ride through a fascinating field which is expanding rapidly.

Multiple Zeta Functions, Multiple Polylogarithms And Their Special Values Jianqiang Zhao, 2016-03-07 This is the first introductory book on multiple zeta functions and multiple polylogarithms which are the generalizations of the Riemann zeta function and the classical polylogarithms respectively to the multiple variable setting. It contains all the basic concepts and the important properties of these functions and their special values. This book is aimed at graduate students, mathematicians and physicists who are interested in this current active area of research. The book will provide a detailed and comprehensive introduction to these objects, their fascinating properties and interesting relations to other mathematical subjects and various generalizations such as their q analogs and their finite versions by taking partial sums modulo suitable prime powers. Historical notes and exercises are provided at the end of each chapter.

Genericity In Polynomial Optimization Tien Son Pham, Ha Huy Vui, 2016-12-22 In full generality minimizing a polynomial function over a closed semi algebraic set requires complex mathematical equations This book explains recent developments from singularity theory and semi algebraic geometry for studying polynomial optimization problems Classes of generic problems are defined in a simple and elegant manner by using only the two basic and relatively simple notions of Newton polyhedron and non degeneracy conditions associated with a given polynomial optimization problem These conditions are well known in singularity theory however they are rarely considered within the optimization community Explanations focus on critical points and tangencies of polynomial optimization Hlderian error bounds for polynomial systems Frank Wolfe type theorem for polynomial programs and well posedness in polynomial optimization It then goes on to look at optimization for the different types of polynomials Through this text graduate students PhD students and researchers of mathematics will be provided with the knowledge necessary to use semi algebraic geometry in optimization
