Plant Life of a Desert Archipelago Richard Stephen

Felger, Benjamin Theodore Wilder, Humberto Romero-Morales, 2013-01-31 The desert islands of the Gulf of California are among the world's best preserved archipelagos. The diverse and unique flora from the cardón forests of Cholludo to the agave dominated slopes of San Esteban remain much as they were centuries ago when the Comcaac Seri people were the only human presence in the region. Almost 400 plant species exist here with each island manifesting a unique composition of vegetation and flora. For thousands of years climatic and biological forces have sculpted a set of unparalleled desert worlds. *Plant Life of a Desert Archipelago* is the first in depth coverage of the plants on islands in the Gulf of California found in between the coasts of Baja California and Sonora. The work is the culmination of decades of study by botanist Richard Felger and recent investigations by Benjamin Wilder in collaboration with Sr Humberto Romero Morales one of the most knowledgeable Seris concerning the region's flora. Their collective effort weaves together careful and accurate botanical science with the rich cultural and stunning physical setting of this island realm. The researchers surveyed, collected and studied thousands of plants seen here in meticulous illustrations and stunning color photographs providing the most precise species accounts of the islands ever made. To access remote parts of the islands the authors worked directly with the Comcaac, an indigenous community who have lived off marine and terrestrial life in this coastal desert region for centuries. Invaluable information regarding indigenous names and distributions are an intrinsic part of this work. The flora descriptions are extraordinarily detailed and painstakingly crafted for field biologists, conservationists, students and others who are interested in learning about the natural wealth of the Gulf of California desert regions or islands in general are sure to be captivated by this rich and fascinating volume. **Corporate Responses to EU Emissions Trading** Jon Birger

Skjærseth, Per Ove Eikeland, 2016-05-13 The European Union (EU) aims to put Europe on track toward a low carbon economy. In this striking challenge the EU Emissions Trading System (EU ETS) has been singled out as the Union's key climate policy instrument ultimately aimed as a model for a global carbon market. The learning effect of the EU ETS could thus be tremendous. This study explores how the EU ETS actually works on the ground affecting corporate climate strategies. It covers general sector responses as well as systematic comparative studies of companies across the sectors. The latter enables improved understanding of causal effects and the role of interaction between different policy instruments and other factors that impact corporate climate strategies. The study explores a broad set of mechanisms at play potentially linking the EU ETS to company climate strategies. These include how corporate norms of responsibility are affected by the EU ETS and how economic incentives provide opportunities for innovation. The book's main contribution lies in its systematic examination of corporate responses to the EU ETS from a broad empirical and analytical social science perspective covering companies in all main EU ETS sectors: electric power, oil, cement, steel and pulp and paper. **ITF Round Tables Expanding Airport Capacity in Large Urban Areas** International Transport Forum, 2014-04-15 This report reviews international experience in reconciling planning and environmental constraints with demand for airport capacity and the potential benefits in terms of
