Abstract *Staphylococcus aureus* strains were isolated from the nasal cavity of patients with nasal polyps and compared with strains isolated from healthy subjects. The strains were characterized by pulsed-field gel electrophoresis (PFGE) and by polymerase chain reaction (PCR) using primers for the *hly* and *hly* genes. The results showed that the strains isolated from patients with nasal polyps were more virulent than those isolated from healthy subjects. The results also showed that the strains isolated from patients with nasal polyps were more resistant to antibiotics than those isolated from healthy subjects.

For closet installation, with a door, the minimum ventilation openings in the top and bottom of the door are required. Louvered doors with equivalent air ventilation openings are acceptable.

Dimensions show recommended spacing allowed, except for closet door ventilation openings which are minimum required. This washer has been tested for installation with spacing of 0" (0 mm) clearance on the sides. Consider allowing more space for ease of installation and servicing, and spacing for companion appliances and clearances for walls, doors, and floor moldings. Add spacing of 1" (25 mm) on all sides of washer to reduce noise transfer. If a closet door or lowered door is installed, top and bottom air openings in door are required.

Minimum capacity: 20 gal. (76 L). Top of laundry tub must be at least 39" (990 mm) above floor; install no higher than 98" (2,44 mm) from bottom of washer.

IMPORTANT: To avoid siphoning, no more than 4.5" (114 mm) of drain hose should be inside standpipe or below the top of wash tub. Secure drain hose with cable tie.

Dimensions are for planning purposes only. For complete details, see installation instructions packed with product. Specifications subject to change without notice.
