### ▼ LATCH Child-Restraint System Installation Procedure (Rear Outboard Seats)

1. First, adjust the front seat to allow clearance between the child-restraint system and the front seat (page 2-2).
2. Make sure the seatback is securely latched by pushing it back until it is fully locked.
3. Expand the area between the seat bottom and the seatback slightly to verify the locations of the LATCH lower anchors.

#### **NOTE**

The markings above the LATCH lower anchors indicate the locations of LATCH lower anchors for the attachment of a child-restraint system.

4. Raise the head restraint to the top locked position. Refer to Head Restraints on page 2-7.
5. Secure the child-restraint system using BOTH LATCH lower anchors, following the child-restraint system manufacturer's instruction. Pull on the child-restraint to be sure both anchors are engaged.

papers. Alas organizational constraints caused a necessity to narrow the acceptance criteria so that only 100 papers have been finally included into the conference program. The area covered by accepted papers is still very large and it shows how vivacious is scientific activity in the domain of computer recognition methods and systems. It contains various theoretical approaches to the recognition problem based on mathematical statistics, fuzzy sets, morphological methods, wavelets, syntactic methods, genetic algorithms, artificial neural networks, ontological models etc. Most attention is still paid to visual objects recognition; however, acoustic, textual and other objects are also considered. Among application areas, medical problems are in majority; recognition of faces, speech signals and textual information processing methods being also investigated. *Federal Register*, 2013-06.
