a high power mode locked thin disk oscillator and to compress the pulses emitted from this laser to durations of only a few  
optical cycles Moreover the monograph introduces several methods to achieve power scalability of compression and  
stabilization techniques All experimental approaches are compared in detail and may serve as a guideline for developing high  
power waveform controlled few cycle light sources which offer tremendous potential to exploit extreme nonlinear optical  
effects at unprecedentedly high repetition rates and to establish table top infrared light sources with a unique combination of  
brilliance and bandwidth As an example the realization of a multi Watt multi octave spanning mid infrared femtosecond  
source is described The thesis starts with a basic introduction to the field of ultrafast laser oscillators It subsequently  
presents additional details of previously published research results and establishes a connection between them It therefore  
addresses both newcomers to and experts in the field of high power ultrafast laser development      MotorBoating ,1970-08
